

# Version 3.99

## New Features

- [Customisable Category Templates](#) — Some product categories require special treatment. If you've got a group of products that are a bit different from the rest, you might wish to display them in a completely different format. With customisable category templates, you can!
- [Customised Category Templates - Copy & Master functionality](#) — Our [Category Template Override feature](#) has been enhanced! You can now create copies of existing templates, as well as nominating as 'masters' any new templates you create.
- [Link custom pages to categories for breadcrumbs](#) — A newly-introduced CMS feature means you can now link a custom page to a product category for breadcrumb purposes.  
When the feature is enabled, you'll see a **'Breadcrumb Parent'** field in your **Page SEO Details** section. You can select any global category from this lookup box, and it will display as the parent of your page in the breadcrumb link.
- [zipMoney & zipPay](#) — BPD now includes support for 'buy now, pay later' provider [zipMoney / zipPay](#). ZipMoney has been added as a new feature in the CMS, and can be configured to offer your customers another way to pay for goods on your website.
- [CMS File Manager](#) — Want to upload multiple files? Edit images? Drag and drop files from your PC into your website's file directory? With our new File Manager, you can!
- [Ability to hide \\$0 Freight charges](#) — A new option ('Show Zero Dollar Freight Charge?') has been added to the [Cart Order Summary Totals Widget](#), allowing freight charges of \$0 to be excluded from the cart order summary.
- [Flyer Creator enhancements](#) — The [Flyer Creator](#) widget & template have been updated to cater for product ribbons, inc/ex tax messaging, and was/now pricing. To enquire about implementation, please [contact us](#).
- [Remember my card details](#) — A new tickbox has been added to the checkout payment options via eWay, allowing the user to remember their credit card details for next time.

This tickbox will only render if the site is using **Authorise & Capture** mode for credit card payments, and the user *role* has "Enable Payment Provider CustomerID Token Retention" enabled.

## Fixes

- [Current product excluded from Recently Viewed](#) — Previously, the currently viewed product was included in the [Recently Viewed Products Widget](#). This has been updated so that the current product is not shown with other recently viewed products.
- [Banner Slider obeying device display settings](#) — Banners set to display only on mobile or desktop (for example), were not always obeying that setting when rendered by the [Banner Slider Widget](#). This issue has now been fixed and the display mode is always respected by the widget.
- [Adding child products to cart on zoned product pages](#) — In certain scenarios, child products (variants) couldn't be added to the user's cart from a zoned product detail page. The [Product Variants Widget](#) has been updated to correct this, now taking into account the system setting for add to cart mode for child products.
- [Stock indicator for master products in a list](#) — In some scenarios (campaign sliders being one), products in a list were not showing availability correctly for master/child products. This issue has been fixed.
