# PayPal Express Checkout

Overview

Position the PayPal Express button on strategic places on your site to allow users to complete their buying in fewer steps. There is no need to enter delivery and billing information as those stored with PayPal are used. This makes checkout quicker and more frictionless.

Configure PayPal Express

This guide covers the implementation of PayPal Express checkout on your Commerce Vision website. **NOTE -** PayPal Express must be switched on for your site by Commerce Vision.

> ℹ️ **Using Braintree Payments?**
>
> If your website offers PayPal as part of your Braintree Payments package, please configure PayPal Express within Braintree Payment settings.

1. Configure PayPal Express settings

Have your PayPal Merchant credentials handy.

1. In the CMS, navigate to **Settings Feature Management**.

2. In the **Configuration Settings** section, enter your PayPal Express credentials:
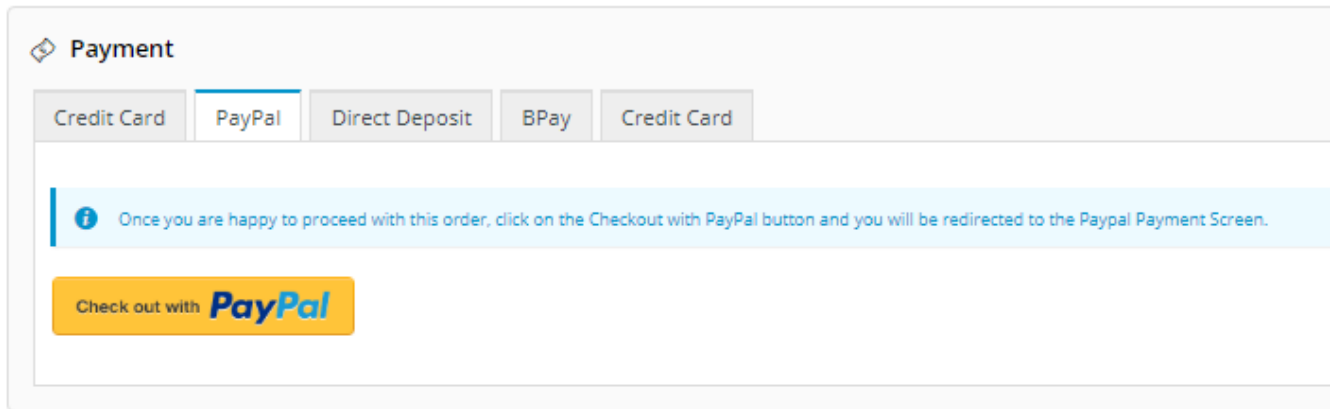

Field	Value
PayPal Express Endpoint	https://api-3t.sandbox.paypal.com/nvp
PayPal Express Login URL	https://www.sandbox.paypal.com/cgi-bin/webscr?cmd=_express-checkout
PayPal Express Username	[Your PayPal Merchant username]
PayPal Express Password	[Your PayPal Merchant password]

| PayPal Express Signature	[Your PayPal Merchant signature]

For testing on your Stage site, use the sandbox environment credentials noted here. Please see the Braintree Payments documentation if your site is using PayPal as part of Braintree Payments. Contact Commerce Vision Support if you require assistance with this.

2. Position the PayPal button on your site for Paypal Express checkout

If PayPal is enabled on your site, at the Checkout page, it will be offered as a payment option along with other options. The buyer clicks the PayPal button to go to PayPal site payment processing.

The PayPal button can also be positioned strategically elsewhere such the **Shopping Cart** and/or on the **Product Detail** for express checkout. Users can go straight to PayPal to bypass the checkout process. Here are some examples:

3. Add PayPal button to Cart or Product Detail page

1. *Go to the page/template you want to add the button, e.g., Cart or Product Detail page.*
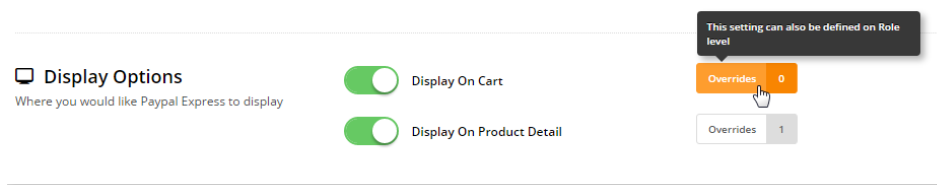

2. In the zone, click **Add Widget**.

3. For the Cart, add the *Cart PayPalExpress Page Button Widget*. For the Product Detail page, add the *Product PayPal Express Button Widget*.

4. Edit options as required, then **Save**.

## 4. Enable display of PayPal button

1. In the **PayPal Express** page (**Settings Feature Management Payment & Checkout PayPal Express**), toggle the options on/off according to your site requirements.

2. You can customise display options at the Role level if required. (For example, you might want to prevent B2B users from using PayPal Express.)
   a. Click the '**Overrides**' icon on the option you wish to edit.

   b. In the **Setting Override** window, notice your site's Global setting. If enabled, the PayPal button is displayed by default for all roles (except any Overrides). If disabled, the PayPal button will over be displayed for any Overrides.

   c. Click **Add Override Setting**.

   d. In **Role**, select the required role.

   e. Toggle the **Override Value** on or off as required.

   f. To save, click **Confirm**. The Overrides counter will display the number of active overrides.

3. Click '**Save**' or '**Save and Exit**' at the top of the page to save your changes.

Congratulations, PayPal Express is now implemented on your website!

Validating Foreign Delivery Addresses from PayPal

> ⓘ When a customer uses PayPal Express to pay for an order, the checkout page where they usually enter a valid delivery address is bypassed. Instead, the shipping address in the PayPal account is automatically transferred into the address fields as the delivery address. When the customer is returned to your site for final order confirmation, the system will perform a foreign address validation check. If the address is located in a country that has not been added in Settings ('Freight Country'), the address will be rejected. The customer will be informed that the delivery country is invalid.

Offering PayPal to B2B Customers

> ⚠️ **B2B Customers**
>
> In order to offer PayPal to your **B2B customers**, you must ensure the 'Credit Card Payments for Orders' flag is set to Yes at the individual customer level. This flag does not affect B2C users.
>
> If the Customer Maintenance page shown below isn't visible to you in the CMS, please contact CV Support.

Additional Information

Minimum Version Requirements	**.**.**
Prerequisites	Merchant Account with PayPal
Self Configurable	No
Business Function	Payment Types
BPD Only?	

	Yes
B2B/B2C/Both	Both
Third Party Costs	Fees Apply
