

Customise Popup Messages

Resource Maintenance

A Resource is a bit of text coded in the Commerce Vision application. The text will appear in a specified scenario(s) as a message to the user. For instance, resources display some prompts and error messages. Here is an example. The text 'Username/Password is not Recognised' displays when login fails:

You cannot create a resource but you can edit the message text by accessing the resource.

Edit a Resource

1. In the CMS, go to **Advanced Content Resources**.
2. Use **Search For** to find resource you wish to maintain. What is in the Resource Code, Resource Value and Description fields are searchable. **TIP** - If you only know the message text, you can enter some or all of it. The message is contained in Resource Value.

Resource Maintenance			
Search For : <input type="text" value="username"/> <input type="radio"/> Contains <input checked="" type="radio"/> Starts With <input type="button" value="Search"/>			
Resource Code	Language Code	Resource Value	Description
rcLoginFail		Username / Password not Recognised	Message corresponding to returned int value for Login() attempt failure where returns: 1.

3. When you find the resource, click the radio button next to it, then click **Modify**.

4. In Resource Value, edit the message text.

Resource Value :

Username / Password not Recognised

TIP - You can also edit **Description** e.g., add a helpful description of the resource function. This is not displayed on your site. **Resource Code** cannot be edited.

5. To save, click **OK**.
