> *Deploy Content is a Commerce Vision multisite feature. This must be enabled by Commerce Vision.*
>
> *Also requires:*
>
> - *LTS 2022.3*

For multisite control, source site CMS Administrator and Content Administrator roles can can copy over *links* to a [product's documents](#) to be displayed in the Product Detail page on target sites. If a deployed product link does not exist on a target site, it will be added. This deployment does not delete existing links on target sites.

NOTE - As document links are not lockable items, CMS users on target sites can add, edit or delete deployed product document links.

What can be deployed?

- a product's document links on the Product Details page

What cannot be deployed?

- the document itself. This must be [uploaded](#) to the server of the target site if it does not already exist. If not, when a site visitor clicks on the link, it will result in a 'Page Not Found' error.

How to deploy a Product Document link

Deploying Product Document links are part of Product Content deployment. See: [Product Content](#) deployment.
