# User Login Window

Overview

Instead of a dedicated login page, present your site's login functionality in a modal window. This gives the user a focused context for login, without navigating away from the page they were on.

Implementing the modal login window is easy. Simply follow the steps below.

Step-by-step guide

To replace the standard Login widget with the modal version:

1. In the CMS, navigate to **Content Theme Layout**.

2. Locate your **Login / Logout widget** (generally located in the first zone).

3. Unselect the tickbox on the Login / Logout widget to disable it. The widget name should now have a strikethrough and look like this:
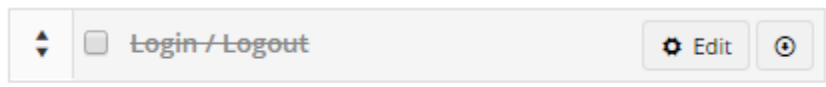

4. Click the **Add Widget** button.

5. Search for '**Login Logout Modal**'. Select it and click '**Add Widget**'.

6. Drag the widget so it sits just under the disabled Login / Logout widget.
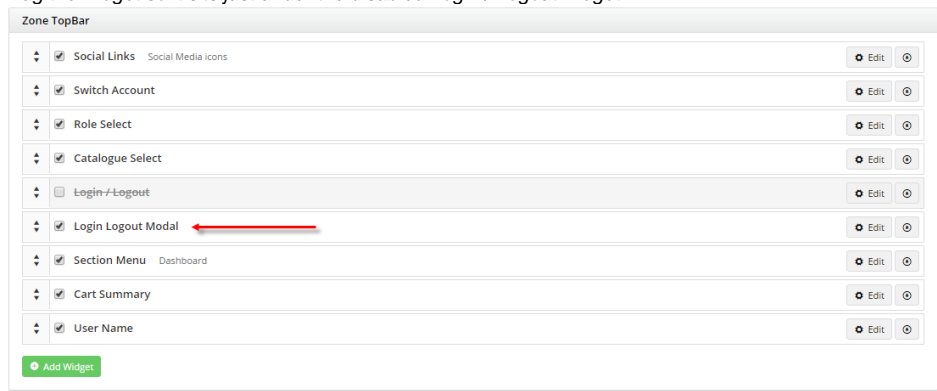

7. In another browser or incognito window, load your website.

8. Click the **'Login'** link and verify that a modal window launches.
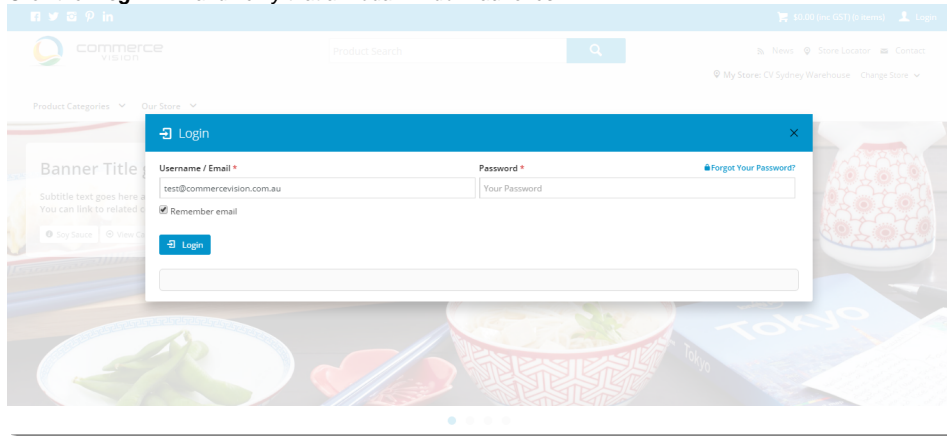

Messaging and prompt text have been set to default values, but are completely customisable.

To customise text and widget options:

1. In the CMS, navigate to **Content Theme Layout**.

2. Click **Edit** on the **Login Logout Modal widget**.

3. *Update settings and text as required.*

∧ **Notifications**

∧ **Buttons**

∧ **Prompts**

User Name Prompt	Username / Email
User Name Placeholder	e.g. you@email.com
Password Prompt	Password
Password Placeholder	Your Password
Keep Me Logged In Prompt	Keep Me Logged In
Remember Me Prompt	Remember email
New Password Prompt	New Password
Confirm Password Prompt	Confirm Password
Notification Email Prompt	Notification Email Address

❌ Cancel   ✓ Save

4. *Click* **Save**.

5. *Re-launch the modal window in your other browser to verify changes.*

You may wish to include additional content in your login window, such as a registration link for new users, for example. This can easily be done by adding widgets to the Login Logout Modal Page template as follows.

To include additional content in the modal window:

1. *In the CMS, navigate to* **Content Standard Pages**.

2. *Select the* **Login Logout Modal Page** *template.*

3. *Add widgets to this page as required (for example, an HTML Snippet widget to render custom text or images).*

Additional Information

The original Login / Logout widget can be deleted from the Theme Layout at any time, however simply disabling it will give the same effect while still leaving the widget intact for future use.
