

# PRONTO Integration - Current Orders

On Integration of '**Current Orders**', the following PRONTO tables will be integrated, triggered by the change events listed:

Table Name	Change Events	Filters
sales-order	so-order-status so-date-stamp	<ul style="list-style-type: none"><li>Fixed filter for so-order-status: only sends where status does not equal '61'.</li><li>Order Archive. Located in CSS 'Settings', 'Integration' tab, 'Customers' tab, 'History Options', field name 'Order Archive'.</li></ul>
sales-order-delivery		Sent with sales-order
sales-order-lines		Sent with sales-order

- **Integrating All vs Changed:** Sending ALL will also remove from the web any sales orders (& their lines), which don't exist in PRONTO.
- If Order Archive value is set, sent records will be limited to the date range specified (ie. setting of '3 months' will integrate orders from today + 90 days prior).
- Order shipped notification emails are also triggered by the Current Orders send sequence.
