

# Product Attributes (Style/Colour/Size) - Classic sites

Product Attribute functionality allows multiple products to be grouped together online based on attributes. This is useful for products which have many variations such as size, colour, style, and so forth.

 This guide details the setup of Product Attributes for non-BPD, classic websites. For BPD websites, see our article on [Product Variants](#).

In order to use Product Attributes, a Master product code must first be set up in PRONTO. The Master code should adhere to the following guidelines:

- Item Type - Z
- Issue Control - U
- A relatively generic description (no colour/size indicated, as these are contained in the 'child' product code)
- The same product group hierarchy as the child product code.
- Tax Code - 1

Once the Master product code has been created in PRONTO, it should be added to a web category. Then the product variants may be configured.

## Step-by-step guide

To configure Product Attributes:

1. Login as an Administrator.
2. Navigate to **'Products & Categories' 'Product Attribute Maintenance'** (/ProductAttributemaintenance.aspx).
3. Enter the master product code in the input field and **Search**.
4. Select the required product via radio button; the **Details** screen will load.
5. Click **'Modify'**.
6. Tick the box labelled **'Is a Master Product'**.
7. In the dialogue box, enter the variant values in this format: **"Attribute Title(Attribute List Type{D/R}):Attribute Value, Attribute Value,Attribute Value"**.  
Values should be determined as follows:
  - **Attribute Title**: the label which will appear to the left of the attribute list (e.g. 'Size' or 'Colour').
  - **Attribute List Type**: **D** - drop-down list, **R** - radio buttons.

- **Attribute Value:** the value which will appear in the attribute list (e.g. 'Size 3' or 'Orange').
8. Click 'OK' to save.

**i** The last Value in the list should **not** be followed by a comma. If there are to be multiple attribute lists (e.g. 'Size' AND 'Colour'), use a semicolon between the last 'Attribute Value' of the first list, and the 'Attribute Title' of the next list.

**Example:** Size(D):Size1,Size 2,Size 3,Size 4;Colour(D):Red,Orange,Grey,Green

9. Click the 'Attribute combinations' tab.
10. Enter the Child product code in the 'SKU' field for the appropriate attribute sequence.
11. Repeat Step 11 for all available attribute combinations which have SKUs/product codes set-up in PRONTO.
12. Tick the 'Checked' box against each combination to be made available online.
13. Tick the 'Create Line Notes' box against combinations which do not have a SKU, but should still be made available online.
14. Click 'Save' to save changes.

Product attributes

Checked	Attribute Sequence	SKU	Create Line Notes	Default	Disabled
<input checked="" type="checkbox"/>	Size:Size 1;Colour:Red	1234567	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Green

**Attribute combination settings:**

**Checked** - This option or combination is available. Especially useful in a '2-dimensional' attribute set-up, where there is more than one selection list and not all combinations are available.

**SKU** - The PRONTO product code for the 'child'/attribute combination. This is the code used for pricing and availability calculations, and is the product code added to the sales order.

**Create Line Notes** - Tick this box if the Child product code/SKU has not been set up in PRONTO, but the option should still be available for sale. In this case, the Master code is added to the order, with the Attribute Value as a note line.

**Default** - Tick this box to nominate an attribute combination as the default. Only one product can be made default, and it must have a product code recorded in its 'SKU' field.

**Disabled** - Tick this box to disable the selected option (e.g. the colour is out of stock for an extended period).

Product Attributes can also be configured via Import. This process is documented separately here [Product Attributes Import - classic sites](#).
