Update Password Widget
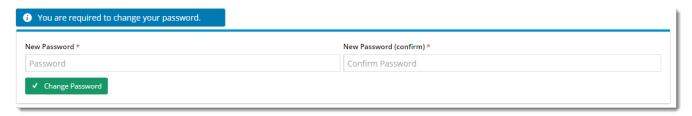

Widget Use

Allows users to update their password after following the reset email link, or navigating to the dashboard.

Example of Widget Use

Where can the Widget be placed?

The widget can be used in the following templates:

- Login Page Template

Widget Options

Option	Use	Comments	Available from Version
Description	A short description of the widget's use.	We recommended this field be updated so the widget's purpose is clear at a glance from the template page.	All
Layer	The layer the widget is valid for.	The layering technology allows for the content to be shown to specific audiences. This is handy if the content is only valid for a certain type of user, or if the same widget is required for more than one audience, but different configuration is needed. The widget can be added to the zone more than once and the layer feature can determine which audience can see each widget.	All
Change Password Message	The text in the notification box and in the label above the new password fields.	Default is: You are required to change your password.	All
New Password Prompt	The placeholder text in the New Password field.	Defaults to the value of system resource 'NewPassword'. Updating this value will update the resource, which may also be used by other widgets.	3.83
Confirm Password Prompt	The placeholder text in the Confirm Password field.	Defaults to the value of system resource 'ConfirmPassword'. Updating this value will update the resource, which may also be used by other widgets.	3.83
