

Version 3.96

New Features

- [Autoplay Off option for Banner Slider](#) — The [Banner Slider Widget](#) now gives you the option to turn the autoplay function off, so that banners don't slide until the user wants them to (cycling through images with the Previous / Next buttons).
- [New Article Detail page widgets](#) — Four new Article page widgets have been created so that Article List widgets no longer need to be used for the Detail page. This allows for updated widget styling (more appropriate to the Article View page), and allows the correct article image to be displayed on the detail page (previously it would show the thumbnail image from the article List). New widgets are as follows:
 - [Article Date Widget](#)
 - [Article Image Widget](#)
 - [Article Title Widget](#)
 - [Article Field Widget](#)
- [New customisation options for Invoice Reprint](#) — The [Invoice Reprint Widget](#) has been updated with new options. You can now customise search titles and subtitles, as well as error notifications.
- [Third Party Delivery for BPD](#) — Third Party (or Drop Ship) Delivery has been enhanced for BPD, with a new, easy interface for maintaining Drop Ship addresses. [Contact our support team](#) to enquire about this functionality for your site.
- [Toggle function for Subcategory List widget](#) — A new option has been added to the [Sub Category List Widget](#), allowing the user to expand and collapse the list of subcategories.
- [Toggle function for Tech Specs widget](#) — The [Product Technical Specifications Widget](#) now has the option to give users a toggle. With the toggle enabled, the content is hidden by default. When the user clicks on the heading, the content expands.
- [View Product button widget](#) — A new '[View Product](#)' button widget is available for use in the Product List. You could use this in place of the Add To Cart button, in situations where it's preferable to navigate the user to the product detail page prior to purchasing.
- [Sliding Filter for Product Features](#) — The ability to display numeric product features as sliding filters is available from version 3.96+ (with additional options from version 4.00+). Similar to a price range filter, you can elect to display numeric features in a sliding range interface (for example, PSI rating, age range, or flow rate).

Fixes

- [IE11 and Multiple Invoice Reprints](#) — Some IE11 users were encountering issues when requesting several invoice reprints at once. The popup window was hanging and the request was not being sent. This has now been fixed.
- [Converted Quotes in Order History](#) — Some users were experiencing problems with converted Quotes not showing up as sales in the Order History screen. This has been resolved.
- [Custom Catalogue product description in cart](#) — Users on some versions reported that Custom Catalogue products had no description in the cart, instead showing only the product code. This happened when the Custom Catalogue product was deemed 'invalid' because it was not part of the Global catalogue. This has now been resolved.
- [Styling fixes for Category Menu widget](#) — Base styles for the [Category Menu widget](#) have been updated so that subcategories appear correctly. The issue with duplicate button text has also been fixed.
- [Social icons not displaying](#) — Social icons were, in some cases, not displaying on sites and emails, even though the URL had been saved in the widget. This issue has now been fixed.
