

Version 4.03

New Features

- [Drag and drop sequencing for Social icons](#)
- [Sign in with Facebook](#) — Single sign-on functionality is now available for Facebook users! From version 4.00+, you can allow your customers to login to your BPD site with their Facebook account, instead of registering for a user ID and password via CSS.
 - Implementation guide - [Facebook Single Sign-on](#)
 - Widget documentation - [Single Sign-on Registration Fields Widget](#)
- [Option to hide Code or Title info for master products](#) — A new option ('**Hide When Master Product**') has been added to the [Product Title widget](#). Now, you can choose to hide the Product Code or the entire widget on detail pages for master products.

For backward compatibility, the default setting for this new option is to hide nothing.

Fixes

- [Freight validation attempt for Pickup orders](#) — For some sites using the 'Warehouse Group' freight method, store pickup orders were triggering messages to the user such as 'The freight on the order was invalid'. This overzealous validation for pickup orders has now been tamed.
