Version 4.14

New Features

- Display the Customer's Currency — Clearly display to your customers the currency in which they are transacting.
  This is useful when your site caters to customers in different countries. The buyer will know what currency they will be paying in at Checkout, and if you offer payment in their local currency, there will be no conversion differences on their credit card or bank account statement.
- Article Content Search — Enhance your site's usability by extending your search capabilities to return more site-comprehensive results.
  Previous search functionality focused on products, but we have widened the parameters to include related content, such as articles, videos, or images.
