

Banners by Device - new interface

We've updated the Banner upload interface in the CMS, allowing you to more easily assign different banner images to various devices. You can upload one banner for all devices, or have one image for mobiles and another for tablets and desktop.

Recommended file sizes and dimensions are displayed under each device, as well as the *actual* file size & dimensions of each image you've uploaded.

This allows you to see where you might have excessively large files which may not give your users an optimal mobile experience.
