More product information for variants

The Product Attribute List & Product List Attribute List widgets have been enhanced with the following capabilities:

- Option to display the product code for each variant in the list. This allows you to show the 'child' code if you wish.
- Option to display the availability of each variant in the list. Let your customers order what you've got in stock! You can also display a custom availability widget here if required.
- Ability to hide availability for certain roles.
- Ability to hide the 'Total ex GST' column (displayed at the end of the list by default).
- Ability to customise the In Stock / Out of Stock prompts

These widgets are used to display variant options on the Product Detail page and in the Product List (zoned layout).
