

CMS Version 1.20

New Features

- [Openpay branding](#) — The Openpay logo and branding messages have been updated to the latest.
- [Zip V2 credentials management](#) — Ability to add Zip V2 credentials has been fully integrated.
- [Expand Guest Checkout by default](#) — Guest Checkout fields can be set to Expand by default. With this option, the Guest User does not have to click the Guest Checkout button.
- [Email Order Summary - Show Back Order Info in Order Confirmation](#) — Backordered products/quantities can now be displayed separately to those available to ship in the order summary section of the confirmation email.

Updates

- [Ability to delete last user-created Script or Style](#) — Previously, a user-created script or style at the bottom of the list was missing the Delete function as an option. This has been fixed.
- [Schedule icon in widget moved](#) — The scheduling icon for a widget was covering the mobile devices icon. This has been fixed.
- [Adding multimedia and links only in a WYSIWYG box not saving in simple content pages](#) — Previously, when entering content via a WYSIWYG textbox for a simple page, media files or links added via the Insert menu item were not always saved. This has been fixed.
- [Article title not displayed for Article Template Override Pages](#) — Previously, article page titles were displayed as guids in the Pages & Templates search. To ensure finding an article page is easy and quick, page titles are now displayed.
