

# Article Image Widget

## Widget Use

Renders the main image on the article detail page (when zoned layout is in use).

## Example of Widget Use

Following is an example of the widget in use:

December News

1 December 2016

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Proin at hendrerit libero. Morbi in blandit odio. Donec fermentum lorem felis, et venenatis purus consectetur faucibus ac mi non, posuere malesuada lacus. Aenean quis suscipit felis, at sagittis massa. Integer purus tellus, pulvinar lacinia consectetur sit amet, tristique quis nunc a molestie lobortis. Proin accumsan, dolor quis maximus auctor, odio dui blandit turpis, congue congue nibh nunc vitae ligula. In blandit turpis neque, quis viv

Cras eleifend laoreet finibus. Nam molestie aliquet dolor, sit amet pharetra elit ultricies eget. Duis quam ipsum, dapibus vitae ante sit amet, efficitur fringilla dolor. ullamcorper non aliquam quis, suscipit id risus. Curabitur sit amet volutpat justo. Praesent tristique nisi magna, dignissim molestie nunc faucibus rutrum. Ma faucibus mauris nec, auctor augue. Quisque in nisl vitae lacus finibus laoreet. Aenean ornare facilisis mi ac aliquet. Vivamus varius malesuada ante nec interdum.

## Where can the Widget be placed?

The widget can be used in the following templates:

- Article Page Zoned Template

## Widget Options

| Option      | Use                                      | Comments  | Available from Version |
|-------------|--|---|------------------------|
| Description | A short description of the widget's use. | We recommend this field be updated so the widget's purpose is clear at a glance from the template page.   | All                    |
| Layer       | The layer the widget is valid for.       | <p>The <a href="#">layering technology</a> allows for the content to be shown to specific audiences.</p> <p>This is handy if the content is only valid for a certain type of user, or if the same widget is required for more than one audience, but different configuration is needed.</p> <p>The widget can be added to the zone more than once and the layer feature can determine which audience can see each widget.</p> | All                    |

|                           |   |   |      |
|---------------------------|---|---|------|
| Article Route Prefix      | The prefix inserted between the main site URL and the article title. Used for SEO purposes.<br><br>For example, in the following URL, 'blog' is the route prefix: <a href="http://www.commercevision.com.au/blog/back-to-the-future">http://www.commercevision.com.au/blog/back-to-the-future</a> | Default is: article                         | 3.95 |
| Enable Article Hyperlink? | Determines whether the Article image is linked to the article detail page.  | Default is: ticked<br><br>Untick to disable | 3.95 |

## Implementation Guide

[Article Page - Zoned layout](#)

## Other Widgets

- [SignalR Group Message Selector Widget](#) — Define the text for the button users will click when selecting a SignalR client—in this example, a printer enabled to [print orders/invoices in PDF format](#).
- [Scripts & Styles Widget](#) — The new Scripts & Styles widget allows you to bundle related scripts and styles into one widget to function as a unit, or add multiple Scripts & Styles widgets to a page and have them operate independently. Due to its name, and because the widget functions to run scripts or apply styles only, you know at a glance if a page is using customised JavaScript or Style Sheets.
- [Account Payment Detail Widget](#) — Renders the payment detail information in the body of the various Account Payment confirmation emails. Information includes (but is not limited to) the order number, account number, invoice, and amount paid.
- [Dashboard Recent Invoices Widget](#) — Displays the logged in user's 5 most recent invoices, with a link to each invoice in detail, as well as a 'View All' option.
- [Dashboard Account Status Widget](#) — Displays a list of the user's customer account status, including balance owing and payment terms, as well as links to statements and the account payment page.
- [Dashboard Articles Widget](#) — Displays a list of the site's news articles, with an image, title, a 'read more' link, and the article expiry date.
- [Dashboard Product Favourites Widget](#) — Displays a list of the user's top 5 favourite products, with links to each product page, as well as an add to cart button.
- [Dashboard Back Orders Widget](#) — Displays a list of the user's backorders with links to the order detail page.
- [Social Sharing Plugin Widget](#) — Acts as a placeholder to output customised javascript based on content from [Add This](#) (social network Share buttons, for example).
- [Return Lines Widget](#) — Where product Returns functionality is in use, renders the return order lines (product, quantity, price, etc.) on the return entry page.
- [Return Information Widget](#) — Where product Returns functionality is in use, renders the details input section (reason, number of parcels) on the returns entry page.
- [Return Confirmation Summary and Lines Static Widget](#) — Where product Returns functionality is in use, renders the return order lines (product, quantity, price, etc.) on the confirmation page after the user submits their return request.
- [Return Confirmation Return Info Widget](#) — Where product Returns functionality is in use, renders the return details (reason, number of parcels) on the confirmation page after the user submits their return request.
- [Return Confirmation Address Widget](#) — Where product Returns functionality is in use, renders the pickup address details on the confirmation page after the user submits their return request.
- [Return Confirmation Message Widget](#) — Where product Returns functionality is in use, renders messages to the user on the confirmation page to advise that their return is in progress + next steps.
