

Stock Availability Popup Widget

Widget Use

Displays a button in the cart next to out of stock products. The button launches a popup window so the user can elect to be notified when products are back in stock.

Example of Widget Use

Following is an example of the widget in use:

Notify Me Button in Cart

The screenshot shows a shopping cart titled 'Shopping Cart' with the instruction 'Please review your cart before checkout.' At the top right, there are buttons for 'Save As Template', 'Hold Order', 'Update Order', and 'Remove All'. The cart contains two items:

Product	Qty	Price (ex GST)	Unit	Discount	Total (ex GST)
Black Foldback Clips, 19mmW, 12 Pack Code: CV286 Out Of Stock	1	\$0.75	Pack	0.00 %	\$0.75
Rubber Bands, 13mm x 152mm, 100g Box Code: CV294 In Stock	1	\$1.95	BOX	0.00 %	\$1.95

For the 'Black Foldback Clips' item, there is a 'Notify Me When in Stock' button. For the 'Rubber Bands' item, there is no such button.

Where can the Widget be placed?

The widget can be used in the following templates:

- Cart Template

Widget Options

Option	Use	Comments	Available from Version
Description	A short description of the widget's use.	We recommended this field be updated so the widget's purpose is clear at a glance from the template page.	All

Layer	The layer the widget is valid for.	The layering technology allows for the content to be shown to specific audiences. This is handy if the content is only valid for a certain type of user, or if the same widget is required for more than one audience, but different configuration is needed. The widget can be added to the zone more than once and the layer feature can determine which audience can see each widget.	All
Invalid Email Address Message	The message displayed to the user when an invalid email address is submitted.		3.79
Notification Request Saved Message	The message displayed to the user when the notification request is successful.		3.79
Remove Notification Success Message	The message displayed to the user when the notification request has been successfully cancelled.		3.79
Remove Notification Fail Message	The message displayed to the user when the cancellation of the notification request has failed.		3.79

Other Widgets

- [SignalR Group Message Selector Widget](#) — Define the text for the button users will click when selecting a SignalR client—in this example, a printer enabled to [print orders/invoices in PDF format](#).
- [Scripts & Styles Widget](#) — The new Scripts & Styles widget allows you to bundle related scripts and styles into one widget to function as a unit, or add multiple Scripts & Styles widgets to a page and have them operate independently. Due to its name, and because the widget functions to run scripts or apply styles only, you know at a glance if a page is using customised JavaScript or Style Sheets.
- [Account Payment Detail Widget](#) — Renders the payment detail information in the body of the various Account Payment confirmation emails. Information includes (but is not limited to) the order number, account number, invoice, and amount paid.
- [Dashboard Recent Invoices Widget](#) — Displays the logged in user's 5 most recent invoices, with a link to each invoice in detail, as well as a 'View All' option.
- [Dashboard Account Status Widget](#) — Displays a list of the user's customer account status, including balance owing and payment terms, as well as links to statements and the account payment page.
- [Dashboard Articles Widget](#) — Displays a list of the site's news articles, with an image, title, a 'read more' link, and the article expiry date.
- [Dashboard Product Favourites Widget](#) — Displays a list of the user's top 5 favourite products, with links to each product page, as well as an add to cart button.
- [Dashboard Back Orders Widget](#) — Displays a list of the user's backorders with links to the order detail page.
- [Social Sharing Plugin Widget](#) — Acts as a placeholder to output customised javascript based on content from [Add This](#) (social network Share buttons, for example).
- [Return Lines Widget](#) — Where product Returns functionality is in use, renders the return order lines (product, quantity, price, etc.) on the return entry page.
- [Return Information Widget](#) — Where product Returns functionality is in use, renders the details input section (reason, number of parcels) on the returns entry page.
- [Return Confirmation Summary and Lines Static Widget](#) — Where product Returns functionality is in use, renders the return order lines (product, quantity, price, etc.) on the confirmation page after the user submits their return request.
- [Return Confirmation Return Info Widget](#) — Where product Returns functionality is in use, renders the return details (reason, number of parcels) on the confirmation page after the user submits their return request.
- [Return Confirmation Address Widget](#) — Where product Returns functionality is in use, renders the pickup address details on the confirmation page after the user submits their return request.
- [Return Confirmation Message Widget](#) — Where product Returns functionality is in use, renders messages to the user on the confirmation page to advise that their return is in progress + next steps.
