

Create a Custom Widget

Advanced content creators can add custom widgets for non-standard functions.

Step-by-step guide

1. In the CMS, go to **Advanced Content Custom Widgets**.
2. Click **Add New Widget**.

3. In **Name**, enter a name for the widget.
4. In **Description**, add a description of what the widget does.
5. If caching is needed, in **Cache Mode**, select a cache option.

Session - Single cached record for individual user based on cached variant.

Application - Single cached record for all users of the same type based on cache variant.

ApplicationSession - Application cached for public users, Session cached for logged in users

Global - Single cached record for all users.

6. To include 'Common Options' standard in widgets, toggle ON **Common Options**.
7. In **Configuration Option Xml**, you can check where that widget is used by clicking **Options Where is it used?**
8. In **Source Code**, enter the source code for the custom widget.
9. To save the widget, click **Save** or **Save & Exit**.

Additional Information

Contact [Commerce Vision](#) if you have any questions or issues enabling this option.
