CMS Version 1.22

New Features

- **Customer Warning Notes now in CMS** — Warning notes added to customer accounts are now also displayed in the CMS. They appear when Website Users are assigned to customer accounts and to approvers reviewing a B2B user's self-registration. The popup note can contain any information relevant to the customer such as applicable business rules, default user budget limits, settings that should not be modified, etc.
- **Online Returns settings added to CMS** — Two online return settings to verify the validity of partial return submissions have been added to CMS Feature Management for easy access.
- **Include Article Type in Breadcrumb** — To give users more navigational info when they are in an article page on your site, you can now include 'article type' in the breadcrumb trail. Especially useful if your site has more than one group of articles and blogs.
- **Sort Categories manually on navigation menu** — You can now re-order top level categories in the order you want displayed in a navigation menu's columns.
- **Eway settings now in CMS** — You can now manage configuration settings for the latest Eway gateway methods - Secured Fields (Direct Connection API) and Responsive Shared Page - yourself. No need submit a request to us,
- **Restrict Promo Code to Customer Type and Role** — We have expanded the ability to restrict a promotion code to Customer Type (B2B, B2C or both). If your business has more than one Role for B2B or B2C, you can now specify which ones to include or exclude when a promo code is being configured.
- **Add Content Schema to Article Type** — You can now add content schema markup for an article type. This detail allows search engines to work out what type of content the article group contains for SEO purposes and return more informative results for users. (For 4.32+)
- **Braintree Payments Settings** — Completely managed in CMS, the Braintree Payments gateway is ready for use on our Ecommerce platform. Braintree conveniently lets you offer your customers a growing list of payment methods. including credit cards, PayPal, Pay Pal's 4 in 1 (PayPal's Buy Now Pay Later option), Google Pay and Apple Pay.
- **SEO URL Generation Maintenance** — Autogenerate and update SEO-friendly URLs completely online for products, categories and articles based on rules you specify.
- **Custom Table Maintenance** — Want online access to records from non-standard database tables? The Custom Table Maintenance feature can be implemented to provide a simple integrated way to manage database tables in the CMS.
- **Single Sign-on with Microsoft Azure AD** — Single sign on with Microsoft Azure AD can now be implemented on your website. This allows users to use their Microsoft authentication credentials to login instead of their username and password. Administrators can prevent specific email domain names from using Microsoft sign-on or force its use.
- **Azure Logic Apps Integration in the CMS** — The use of Azure Logic Apps for ERP integration purposes is now possible on our Ecommerce platform. This alternative method allows you to trigger integrations, view run histories and edit run schedules right from within the CMS.
- **New code editor** — The code editor has been upgraded to provide further editing features, including a version comparison tools for Scripts and Styles and custom widgets.

Updates

- **Mailchimp Product Sync Errors** — Mailchimp Product Sync errors when copying from Live to Stage have now been resolved.
- **Link to Root Level Category Error** — The inability to link a menu item to root level categories has now been fixed.
- **Section Menu Item Save Error** — The inability to save a menu item name change in a Section Menu has been fixed.
