

User Login Window

Overview

Instead of a dedicated login page, present your site's login functionality in a modal window. This gives the user a focused context for login, without navigating away from the page they were on.

Implementing the modal login window is easy. Simply follow the steps below.

A screenshot of a modal window titled "Login" with a blue header bar containing a close button (X). The modal has a white background and a light gray border. It contains two input fields: "Username / Email *" with the value "test@commercevision.com.au" and "Password *" with the placeholder "Your Password". A "Remember email" checkbox is checked. A "Forgot Your Password?" link is in the top right. A blue "Login" button is at the bottom left. A light gray bar is at the bottom of the modal.

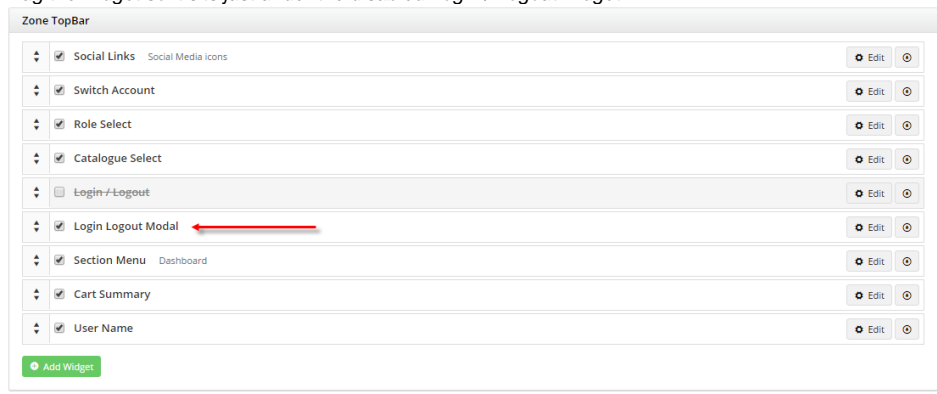

Step-by-step guide

To replace the standard Login widget with the modal version:

1. In the CMS, navigate to **Content Theme Layout**.
2. Locate your **Login / Logout widget** (generally located in the first zone).
3. Unselect the tickbox on the Login / Logout widget to disable it. The widget name should now have a strikethrough and look like this:

4. Click the **Add Widget** button.
5. Search for '**Login Logout Modal**'. Select it and click '**Add Widget**'.
6. Drag the widget so it sits just under the disabled Login / Logout widget.

7. In another browser or incognito window, load your website.

8. Click the '**Login**' link and verify that a modal window launches.

Messaging and prompt text have been set to default values, but are completely customisable.

To customise text and widget options:

1. In the CMS, navigate to **Content Theme Layout**.
2. Click **Edit** on the **Login Logout Modal** widget.

3. Update settings and text as required.

Widget Configuration - Login Logout Modal

Description

Layer: All Pages

Show Forgot Password? ☒

Show Remember Me? ☒

Right Align? ☒ Push element to the right

^ Titles

^ Notifications

^ Buttons

^ Prompts

User Name Prompt: Username / Email

User Name Placeholder: e.g. you@email.com

Password Prompt: Password

Password Placeholder: Your Password

Keep Me Logged In Prompt: Keep Me Logged In

Remember Me Prompt: Remember email

New Password Prompt: New Password

Confirm Password Prompt: Confirm Password

Notification Email Prompt: Notification Email Address

Cancel Save

4. Click **Save**.

5. Re-launch the modal window in your other browser to verify changes.

You may wish to include additional content in your login window, such as a registration link for new users, for example. This can easily be done by adding widgets to the Login Logout Modal Page template as follows.

To include additional content in the modal window:

1. In the CMS, navigate to **Content Standard Pages**.
2. Select the **Login Logout Modal Page** template.

3. Add widgets to this page as required (for example, an HTML Snippet widget to render custom text or images).

4. Re-launch the modal window in your other browser to verify changes.

Additional Information

The original Login / Logout widget can be deleted from the Theme Layout at any time, however simply disabling it will give the same effect while still leaving the widget intact for future use.

Minimum Version Requirements	**.*.*
Prerequisites	--
Self Configurable	Yes
Business Function	Website User Experience
BPD Only?	Yes
B2B/B2C/Both	Both

Third Party Costs	n/a
