### Description

- Rigid Steel Frame Construction. Heavy-duty 2" x 3" and 2" by 4" steel frame construction delivers a rock-solid platform for hardcore cardio workouts. The Endurance T10 is built to withstand constant pounding and jarring.
- Lifetime Tread belt and Shock Absorbent, Low Maintenance Deck. Unlike other brands, Endurance tread belts are guaranteed for life. Plus, our ultra low maintenance phenolic deck employs a SRS (Suspended Running Surface) design supported by a multi-point shock absorption system. What this means is that your knees, hips, ankles and feet will feel comfortable, even during long marathon sessions.
- Extra Thick and Durable Tread Belt. Multi-ply tread belts are fusion-seamed for strength, flexibility and smooth travel over the phenolic deck. Unlike other brands, Endurance tread belts are guaranteed for life.
- Powerful Motor. Endurance motors are designed to exceed horsepower and performance standards for home-use treadmills. Each motor is protected by P.W.M. (Pulse Width Modulation) technology and air-cooled for efficient performance. The integrated circuit breaker protects the motor and control boards from power surges. Bright LED displays let you monitor your running track and provide you with constant feedback on your workout, including heart rate, elevation, time, distance, speed and calories burned.
- Large Diameter Crowned Rollers. Casehardened steel rollers feature a large diameter design with a wide-radius crown to drastically decrease wear, substantially increase surface contact and provide superior belt tracking.
- Safety Key Stop System. Endurance treadmills will only operate when the safety key is engaged on the control panel. This gives you the ability to instantly shut down operation if you need to.
- Quiet Performance. The Endurance Poly-V Belt Drive System delivers an amazingly quiet workout experience, allowing you to watch TV or read a book without being distracted by machine noise.

| PDF example 2          | 265.2 KB |
| Excel example          | 12.1 KB  |
| Here's a 3rd document! | 89.2 KB  |

## 1. Enable Product Documents

1. In the CMS, navigate to **Settings** **Feature Management** **Products & Categories** **Product Documents**.
2. Toggle **ON** **Product Documents**, then click **Configure**.

## 2. Define File Types

1. In 'Allowed File Types', toggle on/off the file types as required.

The full list of allowable file types is as follows:

|        |        |         |
|--------|--------|---------|
| • jpg  | • xlsx | • svg   |
| • jpeg | • csv  | • webm  |
| • png  | • css  | • woff  |
| • gif  | • gz   | • woff2 |
| • html | • ico  | • doc   |
| • htm  | • js   | • docx  |
| • txt  | • lzh  | • zip   |
| • ogg  | • mp4  | • pdf   |
| • rar  | • xls  |         |

2. Don't forget to **Save** your changes!

### 3. Upload and Tag Documents

With the feature on and your file types specified, it's time to upload some product documents.

1. Navigate to **Products & Categories** **Product Maintenance**.
2. Search for the product you require, and click **Edit**.
3. Scroll down to the **Documents** section (it should be below 'Media'. If it's not there, the feature hasn't been enabled - [contact us](#)).

4. Click **Add Files**. The File Manager will open.
5. **Select your document** from the list, or click **Upload** to browse to a local file. You can also drag & drop a file from your PC straight into the file manager.

6. With the document selected, click **Insert**.

7. Now that the document has been added, update the **Display Label** (the document name shown to users). By default, the file name will be displayed.
8. Here, you can also add **Tags** to the document. This is handy if you want a widget on the Product detail page to show **ONLY** documents with a particular tag. (You can see I added a 'Features' tag below - we'll use that later).

Documents

Path  
/Documents/Feature1.docx

Display Label  
Features & Benefits

Tags

Add Files...

9. Repeat these steps for any other documents you wish to add to this product.
10. Click **Save** / **Save and Exit**.

## 4. Add a Product Document Widget

Now you'll need a widget on the product detail page to actually display these handy documents.

1. In the CMS, navigate to **Content Standard Pages**.
2. Select the **Product Detail** page template.
3. Based on your page layout, find the zone you'd like the Documents displayed in and click **Add Widget**. (We placed ours just under the image gallery.)

4. Search for and select the **Product Documents** widget, and click **Add Widget**. Drag the widget to the correct spot in the zone, if needed.
5. Click **Edit** to update the widget options:
  - **Document Tags** - leave blank to display all documents, or enter tag(s) that match your uploaded file(s). For example, I entered a 'Features' tag here, so this widget will only display documents with that tag. I can add another Product Documents widget to show Technical Specs docs separately, if I wish.
  - **Show File Sizes** - displays the size of each file to the right of it. This is a great courtesy to show your mobile users, who might not want to download large files on the go.
  - **Document List Heading** - the title displayed at the top of the widget.

6. Click **Save**.

And that's it! Load your product page in another tab or browser and admire your handiwork. 🍷
