

.css Variables for Scripts & Styles .css editor

For theme layouts created from 2022 onwards, you have access to .css variables to use in the Scripts & Styles .css editor.

Using .css variables cuts down human errors, especially if you're trying to remember the specific colour value of your Primary / Secondary / Alternate style guide colour scheme or font stack.

Here's a guide to using .css variables: https://www.w3schools.com/css/css3_variables.asp

Example of .css variable usage

```
.class-name {  
  background: var(--color-primary);  
  color: var(--color-default);  
  font-family: var(--font-stack-bold);  
}
```

Standard Variables Available:

.css Variable	Purpose
--color-default:	Default style guide colour
--color-default-light:	Default style guide colour (light variation)
--color-default-dark:	Default style guide colour (dark variation)
--color-primary:	Primary style guide colour
--color-primary-light:	Primary style guide colour (light variation)
--color-primary-dark:	Primary style guide colour (dark variation)
--color-secondary:	Secondary style guide colour
--color-secondary-light:	Secondary style guide colour (light variation)
--color-secondary-dark:	Secondary style guide colour (dark variation)
--color-alternate:	Alternate style guide colour
--color-alternate-light:	Alternate style guide colour (light variation)
--color-alternate-dark:	Alternate style guide colour (dark variation)
--color-black:	Black style guide colour
--color-black-light:	Black style guide colour (light variation)
--color-black-dark:	Black style guide colour (dark variation)
--color-grey:	Grey generic colour
--color-grey-light:	Grey generic colour (light version)

--color-grey-dark:	Grey generic colour (dark version)
--font-stack-system:	Framework default font stack
--font-stack:	Your font stack in use
--font-stack-bold:	Bold Font Family
--font-stack-headings:	Heading Font Family
--font-size-core:	Default core font size of theme
--font-stack-alternate:	Alternate Font Family
--mobile-first-breakpoint-small:	Mobile First responsive breakpoint small
--mobile-first-breakpoint-medium:	Mobile First responsive breakpoint medium
--mobile-first-breakpoint-regular:	Mobile First responsive breakpoint regular
--mobile-first-breakpoint-large:	Mobile First responsive breakpoint large
--mobile-first-breakpoint-xlarge:	Mobile First responsive breakpoint xlarge
--mobile-first-breakpoint-xxlarge:	Mobile First responsive breakpoint xxlarge
--mobile-first-breakpoint-xxxlarge:	Mobile First responsive breakpoint xxxlarge
--mobile-first-breakpoint-full:	Mobile First responsive breakpoint Full Width

With your browser's Dev Tools, you can see them displayed for your site theme. Here's an example:

```
Inherited from html.k-webkit.k-webkit101...
root {                                     theme.css?v=151546:3534
  --color-default: #1e3232;
  --color-default-light: #a5adad;
