

Front End Grid System

This is a generic listing of common classes that can be used on the front end to manipulate the UI in a basic way via "additional classes" option on widgets.

URL: /style-guide-grid-system

Grid System

Using the standard grid system to create layouts. Within a grid-row, the space is split up into columns of various widths.

1-1											
1-2						1-2					
1-3				2-3							
1-4			3-4								
1-6		1-6		1-6		1-6		1-6		1-6	
1-8	1-8	1-8	1-8	1-8	1-8	1-8	1-8	1-8	1-8	1-8	1-8
1-12	1-12	1-12	1-12	1-12	1-12	1-12	1-12	1-12	1-12	1-12	1-12

10 Column Width

1 of 10	2 of 10	3 of 10	4 of 10	5 of 10	6 of 10	7 of 10	8 of 10	9 of 10	10 of 10
---------	---------	---------	---------	---------	---------	---------	---------	---------	----------

12 Column Width

1 of 12	2 of 12	3 of 12	4 of 12	5 of 12	6 of 12	7 of 12	8 of 12	9 of 12	10 of 12	11 of 12	12 of 12
---------	---------	---------	---------	---------	---------	---------	---------	---------	----------	----------	----------

Example

Class	Width
col-1-1	100%
col-1-2	50%
col-1-3	33.333%
col-1-4	25%
col-1-5	20%
col-1-6	16.667%
	and so on...

Within a row

You can use the class names in combination, for example 1/3 + 2/3, as long as the row essentially adds up to 100% you'll have symmetrical layouts.
