

Version 2023.1

New Features

- [Orders: PayID Payments](#) —
With **PayID's real-time processing**, transaction approval happens at the moment of payment, giving you a direct deposit option without the usual wait for funds settlement or risking payment exceptions.
- [Users: Magic Links](#) —
Magic links are a type of passwordless authentication method, consisting of an emailed link that allows a user to log into their account with one click, rather than having to enter a username and password into a login box.

Updates

- [More flexible product restrictions](#) — We have made it easier to maintain your product restrictions outside of your ERP by removing the product maintenance mode restrictions
- [Add all to cart button no longer adding recently viewed](#) — We tweaked the logic behind the add all to cart button so that it no longer accidentally adds the recently viewed products to the cart also when it is view on product list pages
- [Locked article and banners no longer allow editing their filters](#) — We fixed the issue where users could still edit the filters on articles and banners that were locked
- [Infinite scrolling, product variants and pre-loading data](#) — Fixed an issue where product options were not loading for those sites that used the combination of infinite scrolling, product variants and enabled the pre-loading of infinite sculling content
