

User Debtor Warning / Error Widget

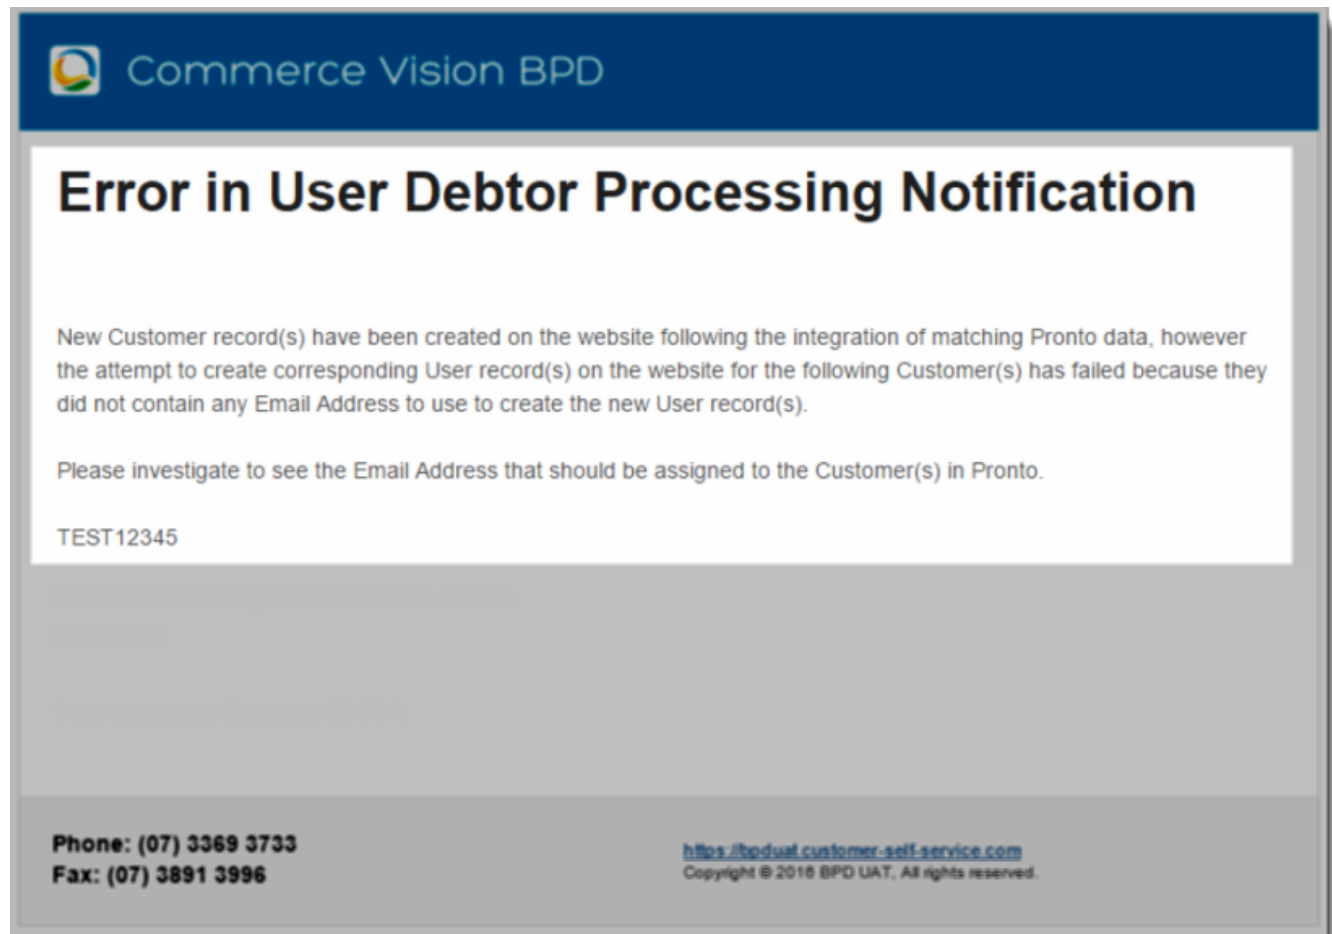

(Formerly known as the User For Customer Warnings Email Content widget)

Widget Use

Renders the message content in the User Debtor Warning / Error email. This email is triggered when User Debtor two-way Integration has been implemented, and a conflict is detected between the ERP and online information. The actual content of the email is hardcoded, depending on the error message returned.

Example of Widget Use

Following is an example of the widget in use:

Where can the Widget be placed?

The widget can be used in the following templates:

- User Debtor Warning / Error Email Template

Widget Options

Option	Use	Comments	Available from Version
Description	A short description of the widget's use.	We recommend this field be updated so the widget's purpose is clear at a glance from the template page.	All
Layer	The layer the widget is valid for.	The layering technology allows for the content to be shown to specific audiences. This is handy if the content is only valid for a certain type of user, or if the same widget is required for more than one audience but different configurations are needed. The widget can be added to the zone more than once and the layer feature can determine which audience can see each widget.	All
