

Article List - Zoned layout

Overview

An article list page on your site can be presented in a variety of layouts. Similar to a product list, article summary tiles can be presented in a grid, list, or slider format.

Using the standard layout, the fields on these article tiles can be customised to an extent, but for greater flexibility, a zoned layout allows you to include custom fields, filter content by layer and features, and rearrange widgets on the template.

This guide will outline how to enable and use the zoned layout for an article list.

Step-by-step guide

1. Update the article list widget in use

You will be using either the Article List Widget or the Article List All Widget to render the article list page. Edit the relevant widget.

Article List All Widget

1. In the CMS, navigate to **Content Pages & Templates Articles**.
2. Select the **Article List Page** template.
3. Locate the **Article List All Widget** and click **Edit**.

4. Select the **Zoned Functions** tab, and toggle on **Use Zoned Article Layout?**. If this is enabled, the **Article List Item Zoned** template is used. (See Step 2 below.)

Use Zoned Article Layout?

☒

5. When **Use Zoned Article Layout?** is enabled, you can change the article list layout by clicking **Change** in the Layout panel.

6. Change the layout as you require. Refer to [Layout Creator](#) for detailed help.
7. Once you have returned to the Article List Page Template screen, move, add, delete and edit widget options as required. (See [Article List Widget help](#).)
8. To save these settings, click **Save**.

2. Customise the Article List Item Zoned template

Once you have toggled on **Use Zoned Article Layout?** for the article list widget in use, the display of the article list sections will largely be determined by the layout selected in the Article List Item Zoned template.

1. Navigate to **Content Pages & Templates Articles**.
2. Select the **Article List Item Zoned** template.
3. The template's default widgets will be present.

4. Drag and drop widgets to re-order them, or add and delete widgets as needed.
5. Refresh your article list page (in another browser or incognito window) to see the changes reflected.
