

Product Variants

Is this feature disabled?

Contact To Enable

This feature needs to be switched on for your site by [Commerce Vision](#).

- You can also request for variant products to be hidden in search results on your site. (See 'Hide Child Products from Product Search' below).

Overview

Product Variants allows you to organise a set of products in a base product (Master) with variants (Child) relationship. Each child product is actually a separate product with its own code (SKU). This is important for stock level and control purposes, but for selling and displaying purposes, a child is a variant option of the Master product.

Here's an example to explain the feature. Our product 'CV149', a High-vis Safety vest, is available in several different sizes and colours. In our ecommerce store, customers will usually go to the 'High-vis Safety vest' page and then just choose the size and colour they want to buy. In their minds, this is one product with options.

As items in store inventory, each variant combination is a separate product and has its own SKU, e.g.:

- CV149A: size - small, colour - yellow
- CV149B: size - medium, colour - yellow
- CV149C: size - small, colour - orange

In fact, when we think of all the possible colour and size combinations items for sale, there are more than 20 SKUs. But maintaining so many combinations separately for this product, and for dozens of other products, isn't very efficient. (And imagine if each combination is just displayed as a separate product. It would surely overwhelm our customers.)

That's where Product Variants comes in. When each child is linked to a master product, you can choose how you want to display and sell them, e.g., on one page where a customer has to select an available child, or with separate pages for each child. You can also set Search to show only the master product in the results instead of every child variant.

Understanding the Master product

Why use Master product?

It is important to understand the role a Master product plays. Think of the master product as a *virtual* product - something that is actually not available for sale. As it can't be purchased, it doesn't require a price or availability. Its role is a kind of a 'hero' product with the power to group together *variants* - those products that can actually be purchased.

In our example of the High-vis Safety Vest, the style, 'High-vis' may be considered what the 'hero' hinges on since it would play a key part in the customer's decision to buy. And this 'High-vis Safety Vest' 'hero' would typically have other properties such as Colour and Size.

When our 'hero' Master product is created, we want its images to give the customer a visual indication of the colour range this style may have. Displayed also may be other Master properties like size guides and videos that don't force us to apply all of them to each individual child variant.

Why do you recommend a Master product as a virtual instead of selecting a variant/child to group such related products?

In our experience, when using a variant product is used as a Master product, it can create problems that requires a lot of re-working.

Let's say you picked a green vest as your Master. Here are some issues you may face:

- Product description will be tricky. Can you keep the description generic or specific since the Child variant code is actually also the Master code? Do you write 'Green high-vis vest' or just 'high-vis vest'?
- You can't allocate other colour images to its Product Code. If the product comes in green, red and yellow, and you want to display an image that shows the 3 colours, you cannot simply allocate it to the green variant, Master or not. This can cause confusion for the purchaser.
- The same goes for availability and price. If the green one has a discounted price because it is discontinued, this can mislead customers into thinking that the red and yellow ones are also discounted.
- If the green vest does eventually disappear, product descriptions, images, documents, etc will have to be moved to another variant you now select as the Master.
- And finally, let's say there is a shortage of green vests. You cannot easily take it offline and sell only the red or blue ones, because the green is the hero. Not without taking the red and blue ones offline with it.

What if we currently don't have a virtual Master product?

We recommend that you create a Master as a non-depleting stock item for a group of variant products in your ERP system. As a suggestion, you can always mark it for identification purposes. For instance, some of our customers have found it useful to start Master product codes with the character 'Z' - i.e. "ZPOLOSHIRT". When they search for it in their ERP system, it is easily locatable at the bottom of the list, and 'Z' tells them this is a virtual product.

1. Configure Product Variant Settings

For Administrators only

Ensure Product Variants is configured correctly for your site.

1. In the CMS, go to **Settings Settings Feature Management**.
2. In **Products & Categories Product Variants**, ensure it is toggled **ON** and click **Configure**.
3. Switch the **Product Variant Mode** to **'Online'**.

4. Configure the **Shared Variant Options** settings. Except for (e), these settings are shared with [Subscription Products](#) that have Master/Child relationships. **NOTE** - Any changes to a shared setting will automatically be applied to both features.

- a. **Default Display Type:** When a Master product has more than one product option, each variant with its values is offered on the Master Product's page to customers. You can select a default display for the user to move between options:

Dropdown List	Radio Buttons	Thumbnail Buttons	Textbox
<p>Number</p> <div> Please Select ▼ </div> <div> Please Select </div> <div> 12 </div> <div> 24 </div>	<p>Number</p> <div> <input checked="" type="radio"/> 12 <input type="radio"/> 24 </div> <div> 1 + - </div>	<p>Number</p> <div> 24 </div> <div>   </div> <div> Clear all Selections </div>	<p>N</p>

NOTE - Thumbnail and Textbox button options require version 4.37+.

- b. **Allow Display Type Override at Variant Value:** toggle ON to allow the default display type to be selected individually for each Variant. **TIP** - It is strongly recommended that this or **Allow Display Type Override** is enabled. One 'select' field type may be better for displaying some kinds of value options but another may be better for another value group.
- c. **Add to Cart Mode:** whether a product is added to cart with the Master or Child product Code . If Master is used, the Child product can be added as a note in the order line. Toggle ON **Allow Child Products as Note Line**.

Product

High Visibility Safety Vest
Code: CV149

Check Other Stores
Size:Small, Colour:Yellow

High Visibility Vest - Med, Orange
Code: CV149
Available on Back Order for Delivery Available on Back Order for Pickup
Check Other Stores
Size:Small, Colour:Orange

- d. **Allow Product Matrix Mode:** whether a toggle should display in Product Maintenance to present product combinations in a matrix. **NOTE** - Matrix mode needs the [Product Variant Grid Widget](#). Default: OFF.

> **Product Options**

Product Code	Size	Colour	Availability	Price inc GST	Qty	Total inc GST
CV149C	Small	Orange	Out Of Stock	\$0.00	- 0 +	\$0.00
CV149A	Medium	Yellow	Out Of Stock	\$0.00	- 0 +	\$0.00
CV149	Small	Yellow	In Stock	\$10.99	- 0 +	\$0.00

\$0.00 inc GST

Add selected to cart

- e. **Allow Display Type Override:** whether to allow the default display type to be overridden on a product-by-product basis. Default: OFF. **NOTE** - If this setting and 'Allow Display Type Override at Variant Value' are both enabled, the latter will be used.
- f. **Allow Child Products As Note Line:** when child products are added with the Master product code, allow to select whether child product attributes are added as a note on the order line. Default: OFF.

The screenshot shows a section of the Product Maintenance interface. It includes a table with columns: Active, Product Code, Variants, and Apply As Note Line. Under the 'Apply As Note Line' column, there is a toggle switch that is currently in the 'OFF' position. A red arrow points to this toggle switch. Below the toggle switch are two buttons: 'Remove' and 'Set As Default Child'.

When ON, a toggle in Product Maintenance allows user to select to add child product attributes on order line

Product

Code: CV149

Available for Delivery

Available on Back Order for Pickup

Check Other Stores

Size:Small, Colour:Yellow

When Apply as Note Line is ON for a child product, its attributes display in the order line as a note.

- g. **Enforce Stock Security for Variants:** select whether to allow stock level settings for each child product to apply. Default: OFF.
- h. **Update Master Products With Child Images:** select whether to add child images to the master product gallery automatically, so that as the User selects a different variant, the relevant image will change. Default: OFF. (See: [Automatic Image Tagging for Variants](#) to configure.)
- i. **Allow Manual Sort of Products Attributes:** select to allow the User to sequence child products by drag-and-drop. Default: OFF.
- j. **Enforce Tag Order Comparison:** Toggle ON/OFF as required.

5. Click **Save**.

The Product Variant feature is now configured and ready to use during product maintenance.

2. Edit Site-Wide Attributes (optional)

The CMS stores a site-wide list of attributes (for example, 'Size') and their associated Values ('Small', 'Medium', 'Large') in a table. This lookup table displays when you add a child product to a master.

You can enter new variants and values directly in [Product Maintenance](#) when you're setting up products, so this step is not mandatory. New variant/values entered in the Product Maintenance page will automatically be added to the list here. You can only edit or correct existing options here.

1. In the CMS, go to **Settings Settings Feature Management Products & Categories**.
2. **Configure the Product Variant** feature.

3. Hover over the **Options** button and select **Edit Variants**.

Don't see an 'Options' button? Check that the **Product Variant Mode** is set to 'Online', then click **Save**.

Product Variant Mode *

Online

4. Click **Add** and enter a Variant in the input field. In our example we'll add 'Size' as a variant.

Variant	Options
<input type="text" value="Size"/>	<input type="button" value="Save"/> <input type="button" value="Cancel"/>
<input type="button" value="Add"/>	

5. Click **Save**. You'll notice the button updates from 'Save' to '**Values**'.

Variant	Options
<input type="text" value="Size"/>	<input type="button" value="Values"/> <input type="button" value="Remove"/>
<input type="button" value="Add"/>	

6. Click **Values** and then **Add** to add a value. Our example values for 'Size' are 'Small', 'Medium', and 'Large'.
7. Click **Save** and repeat to add another value. Continue until all values have been entered.

Value	Options
<input type="text" value="Small"/>	<input type="button" value="Remove"/>
<input type="text" value="Medium"/>	<input type="button" value="Remove"/>
<input type="text" value="Large"/>	<input type="button" value="Save"/> <input type="button" value="Cancel"/>
<input type="button" value="Add"/>	

8. Click **Back** to exit values maintenance and return to your Variant list.
9. Repeat this process for other Variants you need, such as Colour, Capacity, Weight, Length, and so on.

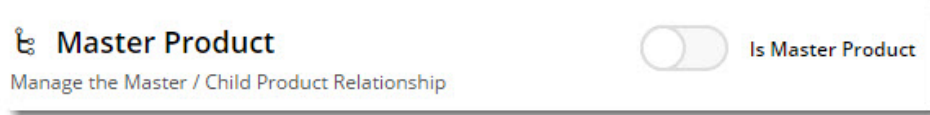

For sites on version 4.13.00+, you can configure your CMS to enable drag-and-drop reordering of your product variants in the list. See: [Manually Sort Product Variants](#).

3. Add Child Products to Master Products

Now let's set up some variants to a Master product!

1. In the CMS, go to **Ecommerce Products & Categories Product Maintenance**.
2. Search for the required product and click **Edit**.

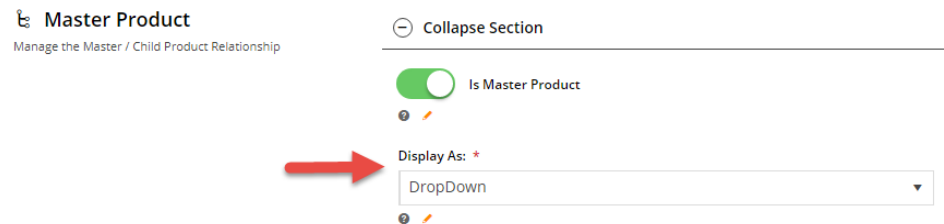

3. Scroll down to section '**Master Product**'.

Master Product
Manage the Master / Child Product Relationship

Is Master Product

4. Toggle ON **Is Master Product** on. The **Child Products** section with additional maintenance fields will appear.
5. If **Allow Display Type Override** is enabled but **Allow Display Type Override at Variant Value** is disabled, the **Display As** dropdown appears. This allows the default variant values display mode to be overridden for just this product. **NOT E** - if **Allow Display Type Override at Variant Value** is enabled, the default display mode can be overridden for each variant when the first child product is added.

Master Product
Manage the Master / Child Product Relationship

Collapse Section

Is Master Product

Display As: *

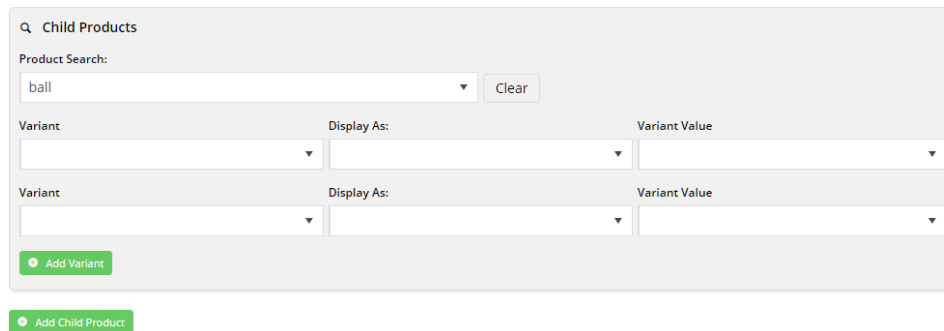

DropDown

6. In the **Child Products** panel, add the Child Products. You can either link another product by searching and selecting it in the **Product Search** field, or leave this blank and just add Variant values. **NOTE** - if you're just using Variant values, the Master Product code will always be used for pricing and **Allow Child Products As Note Line** must be enabled in [Feature Settings](#).

The first Child Product

The attributes of the first Child Product entered will determine how all other Child products are entered.

- If the first Child product is another product, then all other products must be other linked products and not just product variant values.
- All other Child products must have the same variant types as the first Child product but with different sets of values.

Child Products

Product Search:

☒ Radio Button List

Child Products

Product Search:

Variant

Size

Variant Value

Small

Medium

Large

- If there is another variant and value applicable to this Child Product, enter it in the next line, repeating steps 7 -9.
- If a third variant is needed, click the **Add Variant** button.
- Once all variants have been entered, click **Add Child Product**.
- If a Child Product is to be the default variant displayed in the Product List and Master Product Details page, select its **Set as Default Child** button.
- REMEMBER** to save any work done to the Master Product section. Click **Save** at the top of the maintenance page.

The child product(s) are now listed in 'Show Existing Child Product Attributes'. There are also options to make each child product active/inactive, remove it or set it as the default option.

i When a product is a child, a message displays at the top of its Product Maintenance page, to alert CMS users that the product is a variant. Its Master product(s) are also listed. You can click on the Master Product name to go to its Product Maintenance page.

This product is a variant of these master products: [PENN Championship Tennis Balls - 12-Pack \(CV118\)](#)

Make a child product active/inactive

A child product can be toggled 'inactive'. This hides it on your website. For example, a particular variant might be temporarily unavailable so you do not want your customers to select it for the time being.

- If you're already in the 'Master Product' section for the Master product, go to step 4. Otherwise, go to **Products & Categories Product Maintenance**, find the Master Product and click **Edit**.
- Scroll down to the 'Master Product' section.
- Click **Show Existing Child Product Attributes**.
- Toggle **OFF Active** for that child product. You can toggle this **ON** again at any time.
- Click **Save** at the top of the page.

Active	Product Code	Variants	Apply As Note Line	Options
<input checked="" type="checkbox"/>		Size: Medium Colour: Yellow	<input type="checkbox"/>	<input type="button" value="Remove"/> <input checked="" type="button" value="Set As Default Child"/>
<input checked="" type="checkbox"/>		Size: Large Colour: Yellow	<input type="checkbox"/>	<input type="button" value="Remove"/> <input checked="" type="button" value="Set As Default Child"/>
<input checked="" type="checkbox"/>		Size: Medium Colour: Orange	<input type="checkbox"/>	<input type="button" value="Remove"/> <input checked="" type="button" value="Set As Default Child"/>

Remove a Child product from a Master product

Removing a Child product deletes it permanently from the Master product.

1. If you're already in the 'Master Product' section for the Master product, go to step 4. Otherwise, go to **Products & Categories Product Maintenance**, find the master product and click **Edit**.
2. Scroll down to the 'Master Product' section.
3. Click **Show Existing Child Product Attributes**.
4. Click **Remove** for the Child product.
5. Click **Save** at the top of the page.

Select Master product 'hero' image for Product List display

When the Master product is displayed in a product list, you may want a specific ('hero') image to default. Any child product image can be selected.

Enable default image for Master

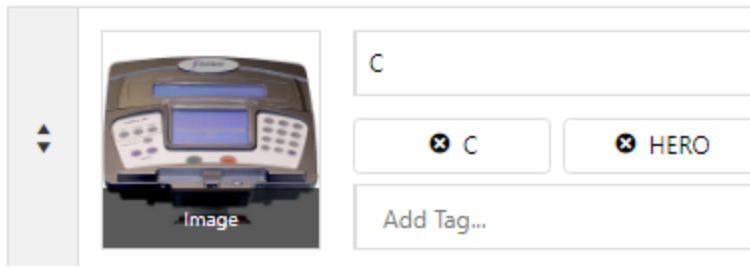

1. Go to **Settings Settings Feature Settings Products & Categories Product Media**,
2. Click **Configure**.
3. In **Product List Image Main Image Tag Name**, enter 'HERO',

4. Click **Save & Exit**.

Select default 'hero' image

1. In **Product Maintenance**, find the Master product.
2. Click **Edit** for the product.
3. Scroll down to the **Media** section.
4. In **Add Tag** for 'hero' image, add 'HERO'. (Type 'HERO', then press **[Enter]**.)
NOTE - If the required image is not available, it has to be uploaded.

5. Save & Exit.

- 6.** To test on your site, look up the Master product in Search with Preview or view products for a category that includes the Master product. The hero image will now default.

Import Product (Child) Variants

This import function lets you bulk upload data to specify particular products as variants of a Master product. After the process, these products will appear as variants for the Master product in the CMS and on your website.

Before you import...

If you want child product images to be added to the Master product automatically, make sure your site has these preconditions:

- The **Update Master Products with Child Images** toggle is ON in **Product Variants** settings.
- Your website is 4.38+
- The child product must already have its images loaded.
- The child product cannot also be a master product.
- The child product is not a child to more than one master product - this feature works for one-to-one relationships only.

To import child product data:

1. Go to **Settings Settings Feature Management Settings Products & Categories**.
2. Click **Configure the Product Variant** feature.
3. At the top of the page, hover over the **Options** button, then select **Import Variants**.

4. If you need the CSV template to work with, click **Download Example Template**. **IMPORTANT** - The columns included in the template will change depending on options selected in Feature Settings. Ensure the template used matches your Product Variant Settings.

Product Variant Import
Back

Need to import large amounts of product variant data? Well, you've come to the right place. Simply browse to your .csv file and select the import method you wish to use.

- Override Imported Only - this method will override (not append) variant data for all products on the import file. That means existing child products not on the CSV will be deleted.
- Override All Products - this method will override (not append) variant data for all products on the site. Any existing variant data not on the CSV will be deleted. This method is best suited to initial bulk uploads of variant data across a whole website.

The Import Log will display feedback and results. If errors are encountered in the data (i.e. invalid product codes), we'll cancel the import and prompt you to correct the affected lines before trying again.

For convenience, we've created a sample import template you can use - simply paste your own data into the appropriate columns and save in .csv format.

[Download Example Template](#)

- Paste your data into the spreadsheet, re-entering the master product ("Parent Product Code") once for every variant combination available.

	A	B	C	D	E	F	G	H
1	Parent Product Code	SKU	Variant 1	Value 1	Variant 2	Value 2	Variant 3	Value 3
2	SOMESHOES	SHOECHILD1	Size	9	Colour	Red		
3	SOMESHOES	SHOECHILD2	Size	9	Colour	Black		
4	SOMESHOES	SHOECHILD3	Size	9	Colour	Yellow		
5	SOMESHOES	SHOECHILD4	Size	10	Colour	Red		
6	SOMESHOES	SHOECHILD5	Size	10	Colour	Black		
7	SOMESHOES	SHOECHILD6	Size	10	Colour	Yellow		
8	SOMESHOES	SHOECHILD7	Size	11	Colour	Red		
9	SOMESHOES	SHOECHILD8	Size	11	Colour	Black		
10	SOMESHOES	SHOECHILD9	Size	11	Colour	Yellow		
11	LIPSTICK	LIPSTICKCHILD1	Colour	Green				
12	LIPSTICK	LIPSTICKCHILD2	Colour	Red				
13								

- Save the file somewhere locally in .csv format.
- Select an **Import Type** from the dropdown:
 - Override Imported Only** - all master products in the file will have their variants replaced with what's in your spreadsheet. No other products will be affected.
 - Override All Products** - the product data in the spreadsheet will become the COMPLETE product variant data for your site. Current variants not in the spreadsheet will be deleted.
- Click '**Select files...**' to browse to your saved .csv file.
- When the import is complete, check that the import was successful. If it failed, check for errors in the data.

Hide Child Products from Product Searches (optional)

When a site visitor does a product search, the standard option is to display the master product and each child product with own product code separately:

Another option is to have child products hidden in search results, and only show the Master product:

If 'Hide Child products' is active, this message appears next to the 'Display Online' toggle in the Product Maintenance page:

Product Information

Editable product information stored in CSS

⊖ Collapse Section

Display Online

The following configuration may prevent this product showing up in product searches:
- the 'Hide Children Attributed Products' system setting is enabled. As this product is a variant of another product it will be hidden from searches.

Switch On/Off Hide Child Products from Searches

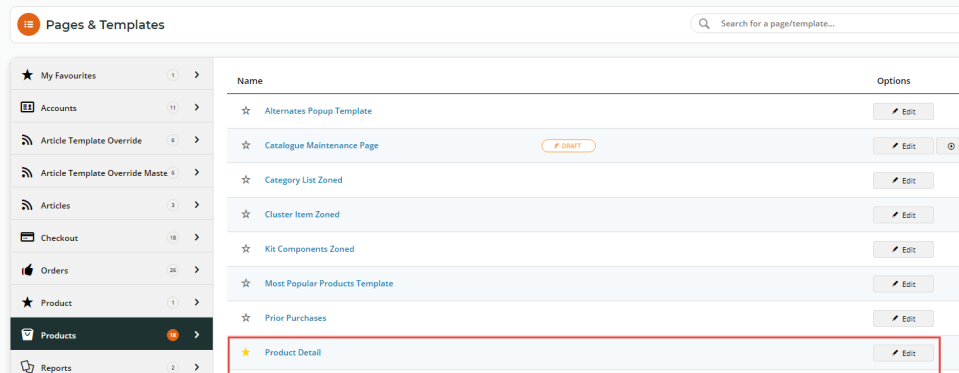

If you prefer to have **child products hidden from search results** switched on or off for your site, please contact [Commerce Vision](#).

Include Child Product Reviews in Master Product Page

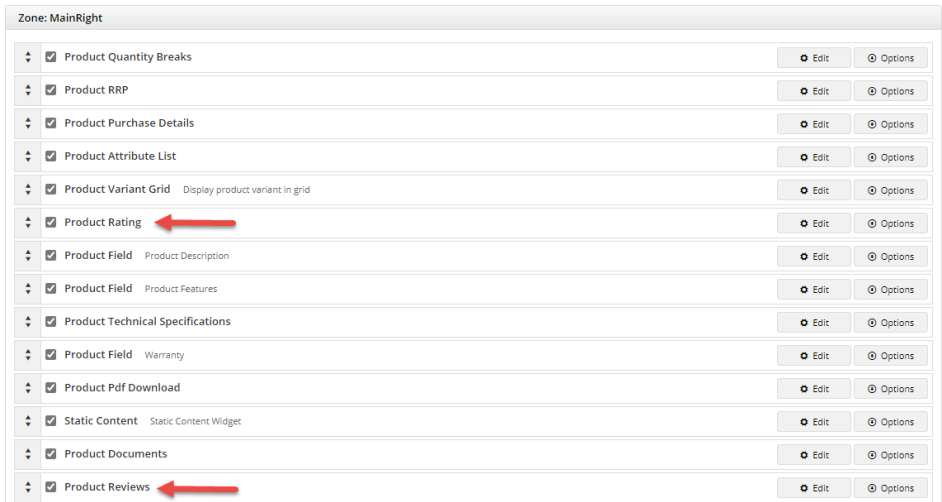

From version 4.31+, child product reviews can be included in Master product detail pages if both Child and Master products are displayed on your website.

To enable this option,

1. Go to **Content Pages & Templates Products Product Detail**.

2. Find the **Product Reviews** or **Product Rating** widget. (**NOTE** - If either widget has not already been added, you can always add it to the zone you want them displayed in.)
3. For one of the widgets, click **Edit**.

4. Toggle **ON Include Child Reviews on Master Products**.

5. Click **Save**. The setting will be saved in both widgets.

Additional Information

You can display variants on their own individually or as variants in a single product page.
