

# PRONTO Integration - Product Notes

On Integration of 'Product Notes', the following PRONTO tables will be integrated, triggered by change events for each table:

Table Name	Change Events	Filters
stock-notes	stk-date-last-change  stk-creation-date	Note Types. Located in CSS: 'Settings', 'Integration' tab, 'Notes' tab.
stock-master	stk-date-last-change  stk-creation-date	The 'Product Notes' date stamp comes from the stock master record. The value of stk-date-last-change or stk-creation-date is to be greater than or equal to the last sent date of 'Product Notes'.

Product Notes data is sent for:

1. GeneralNotes
- If 'Remove Note Lines Space' setting is ticked, it will apply to all note types. Integration will concatenate the 30-character field blocks and remove spacing between them. This is desirable for Notes entered via 'WP' mode, but not 'Entry' mode.

Update

General Information

Standard

Item Code: INOTPS215 Type:

S... Notational Text

1.0 Notes entered via the WP mode  
2.0 are typed into a word  
3.0 processing interface, and  
4.0 PRONTO breaks the lines at the  
5.0 30 character mark. When they  
6.0 are concatenated later, extra  
7.0 spaces are not required.

Find Entry Correct Remove Type WP

2. AlternateCategoriesNoteType

- Alternate Categories Notes 'Send Changed' behaves the same as 'Send All' for integration.

3. ColloquialNames (Located in CSS 'Settings', 'General').

- If the field is blank, the function is turned off & Colloquial Names are not sent.
- Only the first 20 characters of the note are integrated.
- During 'Send All', any fields not updated with a new value are cleared/re-set to blank.

eWay API Key :

If the flag '**Integrate Only Valid Products**' is set to 'Yes', it will be adhered to during a 'Send All'. A 'Send Changed' will override the flag and integrate any changed products, whether valid or not. This is important for Custom Catalogues, which may contain products deemed 'invalid'.
