

Integration for AddToCart functionality

The Add To Cart functionality allows products to be added to the current order by accessing a web page.

Step-by-step guide

Setup:

1. Setup the following default templates (via zAllocate.aspx):
 - a. Add To Cart Success Template (can use tokens for Product in the template)
 - b. Add To Cart Fail Template
2. It is not essential to setup the templates. If they don't exist a default value is displayed:
 - a. For success: "Successfully added [Product.ProductCode] to cart."
 - b. For fail: "Failed to add [Product.ProductCode] to cart."

To add products to the current order:

1. Login to the CSS website. You need to login otherwise the products will not be added to the order.
2. Go to the page AddToCart.aspx and pass the following parameters:
 - a. ProductCode
 - b. Qty
3. If the product is already on the order, the quantity of the product on the order is increased by the Qty specified.

For example, if the website is **mywebsite.com** to add the product "ABC123" to the current order go to the web page: **mywebsite.com/AddToCart.aspx?ProductCode=ABC123&Qty=1**

In order for the product to be added to the current order:

- A user must be logged in.
- The logged in user must have access to AddToCart.aspx page.
- All the parameters must be specified and must be valid:
 - ProductCode must be an existing product.
 - Qty must be a positive integer greater than zero.
