

# Product Search With Preview Product Category List Widget

## Widget Use

Controls the hierarchical category list structure for products matching the search keyword(s), when the [Product Search With Preview Widget](#) is used.

## Example of Widget Use

## Where can the Widget be placed?

The widget can be used in the following templates:

- Product Search with Preview Template.

## Widget Options

Option	Use	Comments	Available from Version
Description	A short description of the widget's use.	We recommend this field be updated so the widget's purpose is clear at a glance from the template page.	4.13.00
Layer	The layer the widget is valid for.	<p>The <a href="#">layering technology</a> allows for the content to be shown to specific audiences.</p> <p>This is handy if the content is only valid for a certain type of user or if the same widget is required for more than one audience but different configurations are needed.</p> <p>The widget can be added to the zone more than once and the layer feature can determine which audience can see each widget.</p>	4.13.00

<p>All Categories Expandable?</p>	<p>Determines whether all categories are expandable or expanded. When OFF and both 'Always Expand Top Level?' and 'Always Expand Sub Levels?' are OFF, all categories and subcategories display expanded.</p> <div><h3>"pen" Categories</h3><div><div>Office Products</div><div>Writing</div><div>Ballpoint Pens (7)</div><div>Gel Pens (6)</div><div>Rollerball Pens (5)</div><div>Specialty Pens &amp; Refills (6)</div></div></div> <p>If ON and the 'Always Expand Top Level?' is ON, only the top level categories are displayed. The user clicks on the arrow to open the category.</p> <div><h3>"pen" Categories</h3><div><div>Office Products</div></div></div> <p>If ON and only the 'Always Expand Sub Levels?' is ON, the last subcategory (if there is one) is displayed.</p>	<p>Default: OFF</p>	<p>4.13.00</p>
-----------------------------------	---	---------------------	----------------

Category URL Prefix	The results URL used to list the category clicked.	<p>When the user enters a keyword into the Search with Preview tool, a hierarchical list of categories displays down the left side of the results view. If they click one of these categories, the Category URL Prefix is the name of the top category for the results.</p> <p>For instance:</p> <ul style="list-style-type: none"> <li>Our site domain is <b>https://all-products-r-us</b> and we set the category URL prefix value to categoryURLprefix.</li> <li>We run a search and get results in a category hierarchy of Sports &amp; Outdoors &gt; Camping &gt; Tents.</li> <li>We click on 'Camping' to display everything in that category.</li> <li>The search results will begin from: <b>https://all-products-r-us/categoryURLprefix/sports-and-outdoors/camping</b></li> </ul> <p>This value might be useful as an interim measure if your site has undergone a restructure.</p> <p>The default value is empty, so the URL just follows the product category hierarchy.</p>	4.13.00
Always Expand Top Level?	(See All Categories Expandable? field.) When ON, the category hierarchy will display expanded from top to sub levels.	<p>Default: ON.</p> <p>Toggle to disable</p>	4.13.00
Always Expand Sub Levels?	<p>When ON, when the user clicks the down arrow to display product sub-categories, then all sub-levels will unfold.</p> <p>When OFF, the user must click to open each product sub-category. If OFF but the Always Expand Top Level? button is ON, the top two levels expand, but the user must click the down-arrow to display the lowest sub-category.</p>	<p>Default: ON</p> <p>Toggle to disable</p>	4.13.00
Search Title	Heading for the category hierarchy	<p>Default: "{0}" Categories</p> <p>{0} - displays the keyword.</p>	4.13.00
