

Display Customer Currency Widget

Widget Use

Displays the default currency set for a Customer based on login for websites operating in international markets.

Example of Widget Use

Following is an example of the widget in use:

Where can the Widget be placed?

The widget can be used in the following templates:

- All
- Most common: Theme Layout

Widget Options

Option	Use	Comments	Available from Version
Description	A short description of the widget's use.	We recommend this field be updated so the widget's purpose is clear at a glance from the template page.	4.14.00
Layer	The layer the widget is valid for.	The layering technology allows for the content to be shown to specific audiences. This is handy if the content is only valid for a certain type of user or if the same widget is required for more than one audience but different configurations are needed. The widget can be added to the zone more than once and the layer feature can determine which audience can see each widget.	4.14.00
Displayed Text	Displays the currency code associated with the customer's login.	Default: Prices are displayed in {0} You can change the text preceding the "{0}". The "{0}" placeholder retrieves the customer's currency from the database.	4.14.00
Default Local Currency	The default currency in which the site transacts.	Automatically populated based on your site's transacting currency.	4.14.00
