# Integrator Settings - Timing Items

The Settings **'Timing Items'** tab is where various database fields can be toggled on or off with regard to integration.

For example, if a business does not deal in item subscriptions, there is no need to send data from the PRONTO's *stock-conversion-procedure* table to the web's *SubscriptionProductRelease* table. Turning off unnecessary processes can speed integration and reduce data overhead.

Step-by-step guide

To Maintain Timing Items Integration Settings:

1. *Open the Integrator client.*
2. *Click the* **'Settings'** *icon along the top menu.*
3. *Click the* **'Timing Items'** *tab.*
4. *Tick or untick items as required.*
5. *Click* **'OK'** *to save.*
