

# Mega Menu Widget

## Widget Use

Renders the category mega menu, in which each top level category is displayed as a menu item, with subcategories expanding beneath.

## Example of Widget Use

Following is an example of the widget in use:

## Where can the Widget be placed?

The widget can be used in the following templates:

- All Templates

## Widget Options

Option	Use	Comments	Available from Version
Description	A short description of the widget's use.	We recommend this field be updated so the widget's purpose is clear at a glance from the template page.	All
Layer	The layer the widget is valid for.	The <a href="#">layering technology</a> allows for the content to be shown to specific audiences.  This is handy if the content is only valid for a certain type of user, or if the same widget is required for more than one audience but different configurations are needed.  The widget can be added to the zone more than once and the layer feature can determine which audience can see each widget.	All
Mobile Menu Prompt	The top level menu label when viewed on a mobile device.	Default is: Categories	All
Number Of Levels To Show On Mobile	The number of category levels the user can drill down to on mobile devices.	Default is: 3	All
Mobile Back Prompt	The text label for the 'back' link within the menu.	Default is: Back	All
Number Of Levels To Show	The number of category levels the user can drill down to on desktop browsers.	Default is: 3	All
Show Single Column for 2 Level Categories?	Determines whether just the upper level category is displayed in cases where the category consists of 2 levels.	Default is: enabled  Untick to disable	All
Max Number Of Columns	The maximum number of category columns under any one menu item.	Default is: 4	All

Category URL Prefix	The prefix inserted into the category URL before the category name. Primarily used during existing site upgrades to BPD, where it is desirable to maintain existing URLs.	Example: /category	All
Break Descriptions Over Two Lines	Determines whether longer top level category descriptions are broken into 2 lines. This is useful where there are many top level categories, as 2 line descriptions are more compact.	Default is: disabled Tick to enable	All
Use Manual Column Sequencing?	Determines whether to use manual assignment of categories into columns. When enabled in Integrated mode, sort sequence is derived from Category Maintenance program in PRONTO.  In Online mode, the user can manually assign categories to columns in the CMS.	Sort sequence 100s will appear in the first column, 200s will appear in the second column, etc.  Default is: disabled Tick to enable	Online mode 4.31
Home Page Link Icon	Setting this field inserts a link to the home page (in the form of the selected icon) at the start of the mega menu.		All
Render Mobile Menu?	Determines whether the menu should be displayed on mobile devices.	If the flyout-style Mobile Menu widget has been added to the Theme Layout, we recommend this setting be unticked so the mega menu does not render on mobiles.  Default is: enabled Untick to disable	All
<b>Section Menu Settings</b>			
Section Menu Item Code	Select the required menu from a dropdown list of all your site's section menus.		3.91
Section Menu Append / Prepend to Category Menu?	Determines whether the section menu is displayed before (prepend) or after (append) the categories in the mega menu.	Default is: Prepend	3.91
Section Menu Heading	The label displayed as the section menu heading.		3.91
Section Menu Link	An optional link for the the section menu heading.		3.91
Section Menu Icon	An optional icon to be displayed next to the section menu heading.		3.91
Section Menu Icon Position	Determines whether the icon (if one is set) is displayed to the Left or Right of the section menu heading.		3.91
Section Menu Show Item Icons?	Determines whether the icons for each menu item are displayed.	Default is: disabled Tick to enable	3.91

**Please note** - updating options in this widget will require a Template cache refresh in order for the changes to be visible.
