Qty in cart: 0

Where can the Widget be placed?

The widget can be used in the following templates:

- Product Detail Template

Widget Options

Option	Use	Comments	Available from Version
Description	A short description of the widget's use.	We recommended this field be updated so the widget's purpose is clear at a glance from the template page.	All

Layer	The layer the widget is valid for.	<p>The layering technology allows for the content to be shown to specific audiences.</p> <p>This is handy if the content is only valid for a certain type of user, or if the same widget is required for more than one audience, but different configuration is needed.</p> <p>The widget can be added to the zone more than once and the layer feature can determine which audience can see each widget.</p>	All
Product Field	<p>The field the widget reads when displaying data on the page.</p> <p>This could be Product Code, Product Description, APN, or any other field from the product table in the database.</p>	Select via drop-down	All
Show Heading?	Determines whether a heading will be displayed.	<p>Default is: ticked</p> <p>Untick to disable</p>	All
Heading Text	The heading text (where heading is enabled).		All
Fallback Information	The fallback content to display for products with no data in this field.		All
Show Toggle?	Determines whether the section can be expanded and collapsed by the user. The content is collapsed by default and expanded when the user clicks the toggle arrows.	<p>Default is: unticked</p> <p>Tick to enable</p>	All
Show Inline Heading?	Determines whether to display the heading inline with (instead of above) the field content.	<p>This will be ignored when Show Toggle is enabled.</p> <p>Default is: unticked</p> <p>Tick to enable</p>	All
Hide Product Code for Master Product?	<p>When the widget is set to display the Product Code, and the product is a master (i.e. has variants/child products), this option hides the product code.</p> <p>This prevents end users getting confused when they see one product code on the detail page, but another after they select variants and add the product to cart.</p>	<p>Default is: unticked</p> <p>Tick to enable</p>	3.96
Link Options			
Show as Link	Determines whether the field is rendered as a hyperlink.	<p>Default is: unticked</p> <p>Tick to enable</p>	3.92
Link Text	The text to display for the hyperlink.		3.92
Open Link in New Window	Determines whether clicking the link redirects the user in their current window / tab, or a new one opens.	<p>Default is: unticked</p> <p>Tick to enable</p>	3.92
