

Version 3.89

New Features

- [Link for GST Toggle to Cart Summary](#) — A new option has been added to the [Cart Summary widget](#), allowing it to be linked to the [Tax Toggle widget](#) (if in use). When linked, the cart summary amount will update when the user toggles between GST inclusive and exclusive display.
 - [Widget documentation - Cart Summary Widget, Tax Toggle Widget](#)
- [New option to display numeric values for Credit Card expiry dates](#) — A new option ("Show Numeric Card Expiry?") has been added to the Checkout Payment Options widget. This allows numeric values to be displayed at checkout for credit card expiry dates. With this option enabled, the user will select '05' & '19' rather than 'May' & '2019'.
 - [Widget documentation - Checkout Payment Options Widget](#)
- [New role selection system flag](#) — A new system flag has been created to define how roles are selected when the user logs in and changes accounts. The change relates to users who have specific roles linked to particular accounts, and whether their role should change upon change of account.
- [Improved ordering of attribute products](#) — A new Product Attribute Grid widget has been created to improve the UX when ordering attribute products with 2 or more dimensions (style/colour/size) in the zoned product list.
- [Order Import enhancements](#) — Multiple enhancements have been made to Order Import in BPD:
 - a new Order Import widget has been created with configurable options
 - multiple files can now be imported
 - data rows can now be validated prior to performing the import
- [New email templates](#) — New BPD responsive email templates have been created:
 - Customer Statements Available Email Template
 - Budget Expiry Warning Email Template
 - Budget Remaining Email Template
 - User Approval Request Email Template
 - User Approval Rejected Email Template
 - User Approval Granted Email Template
 - User Approval Unrejected Email Template
 - Order Approval New Approver Email Template
 - Order Approval Replaced Approver Email Template
 - Alerts Email Template
 - Receipting Information Email Template

You can see examples of these emails here - [Widget-Based Email Templates](#)

- [New flag in Product Maintenance to mark product as 'POA.'](#) — A new product-level 'POA' flag has been added to the Product Maintenance page in the CMS. This allows administrators to mark products as POA even though they may have a price record in PRONTO. Products with this flag enabled will not display a price on any page of the website, or in Price Book Exports.
- [RRP inc- and ex-tax widgets](#) — Two new pricing display widgets have been created - Product RRP Inc & Product RRP Ex. These can be used to display RRP pricing to various customer segments, controlling the rendering of the widget through roles and layers.
 - [Widget documentation - Product RRP Inc Widget & Product RRP Ex Widget](#)
- [Disable BPD delivery methods by role](#) — A new role flag has been added to disable the BPD delivery methods functionality.
- [Custom layouts for zoned Article templates](#) — The Article Page Zoned template (used for the 'detailed' article view) was previously restricted to a single zone layout. An enhancement has now made this template compatible with custom layouts via the Layout Creator.
 - [Documentation - Layout Creator](#)
- [New Local Storage browsers message widget](#) — A new Feature Support widget has been created to advise users when their browser does not allow access to local storage.
 - [Widget documentation - Web Browser Feature Support Widget](#)
- [New options for Page Title Dynamic widget](#) — The ability to add an optional container class and display the Category Description has been added to the Page Title Dynamic Widget. This enables the widget to dynamically display the title and subtitle for Category and Product List pages, as well as the Product Detail page.
- [Option to hide order totals on Order Confirmation Email](#) — A new option has been added to the Email Order Summary widget, enabling the dollar totals section of the order summary to be hidden in the Order Confirmation Email.
 - [Widget documentation - Email Order Summary Widget](#)
- [Order History search on page load - new option](#) — A new option has been added to the Track Order widget, determining whether the order search is triggered on page load. This option allows sites using Live Order History to avoid excessive calls to the ERP.
 - [Widget documentation - Track Order Widget](#)
- [Product Categories breadcrumb options](#) — New options have been added to the Breadcrumb widget, allowing you to specify the text and relative URL for the Category List breadcrumb.
 - [Widget documentation - Breadcrumb Widget](#)
- [Search suggestions display Product Title instead of Description](#) — An update has been made to the predictive search method, so that suggestions appearing during search will display the Product Title instead of the Description (where populated). If the Title is not populated for a product, the Description will be used as the fallback.
- [Style sheet editing via CMS](#) — Customers can now develop custom styles by editing the updates.css stylesheet file from within the CMS. The history of changes is stored, as well as the editing user. There is also functionality to revert contents of the file to a previous version. This functionality is available for sites on version 3.85+.
 - [Documentation - Style Sheet Editor](#)

Fixes

- [Banner sequence retained in CMS](#) — The sequence of banners can be adjusted in the CMS via drag & drop functionality, however with > 10 banners, the sequence was not retained on refresh of the CMS Banner Maintenance page. This has been fixed.
- [Mobile keyboard vs +/- quantity buttons](#) — The plus / minus (+ / -) quantity adjust buttons were launching the keyboard on mobile iOS devices. This has been fixed.

- [Fallback for account number in Auto Part Registration](#) — The Auto Part Registration process has been updated to ensure that the system default customer code is used as a fallback if a B2B user completes registration without entering an account code.
- [Recently viewed products on product list page](#) — In some instances, the Recently Viewed widget was not rendering correctly on the Product List page. This has been fixed.
- [Cart summary updates on add to cart](#) — In some scenarios, the cart summary widget was not updating on add to / remove from cart events. This has been fixed.
- [Article view button displays regardless of thumbnail image](#) — The 'Read More' button was previously being hidden from the article List view if the article did not have a thumbnail image loaded. This has been changed so that the button will render regardless of whether a thumbnail is loaded.
- [Availability display when Store Pickup selected](#) — Sites calculating stock availability from all warehouses were experiencing issues with incorrect availability when Store Pickup was selected. In these cases, the true availability for that store location should be shown (but was not). This has been fixed.
- [IE & Firefox issues with Order Approve page](#) — Users on certain versions of IE and Firefox were unable to adjust line quantities with the + / - buttons in Order Approve. This has been fixed.
- [Entered By data in Order History](#) — The order history page was caching the 'Entered By' value in some cases, so that the ordering user displayed was incorrect in the order detail view. This has been fixed.
- [Kit item availability by warehouse](#) — An issue existed where the overall kit availability was being returned even when a particular warehouse was specified. This has been fixed.
- [Live Freight checkout prevented when carrier code missing](#) — An issue existed within Live Freight, if freight was not available and the carrier code was missing, the user could not checkout. No alert or warning was displayed to advise the user. This has been fixed.
- [Dashboard My Address fix for postcode validation](#) — The 'My Address' section of the Dashboard was not using the default country to execute postcode validation, resulting in some valid combinations failing. The Enable Postcode Validation widget option was also not being obeyed in some instances. This has been fixed.
- [Special characters in search suggestions](#) — The ASCII characters "&153;" (™) and "&174;" (®) were not displaying correctly in search suggestions (occasionally due to deprecation). A fix has been implemented for this, and HTML ASCII characters will now render as expected."
- [Charging backordered items in PayPal](#) — In some instances, information regarding backordered products was not sent to PayPal correctly, resulting in those products not being included in the PayPal total. This has been fixed.
- [Product images in PDF Price Book Exports](#) — Product images were previously not displaying in PDF versions of the Price Book Export. This has been fixed.
