CMS Scripts & Style Sheet Maintenance

The new CMS Scripts & Styles editor enables you to create and edit JavaScript or Style Sheet files directly in CMS without having to upload a new file every time they make a change.

Tell at a glance if a page uses a script or style customisation rather than trolling through countless HTML Snippets to find which one runs a script.

Use case

As we use the Scripts & Styles widget for JavaScript or Style Sheets only, it is easy to locate should you need to make changes or disable.

ⓘ For more information, please refer to the Knowledge Base article at CMS Scripts & Styles.
