

Layer filters - User email address

A new option has been added to BPD's [Layers](#), enabling the layer to apply to specific users. This is done via email addresses (including wildcards). Enter multiple addresses separated by a comma, or specify a whole domain such as `*@commercevision.com.au` (which will target all users with an `@commercevision.com.au` email address).

 **Users**

Layers can apply to specific users to specifying one or more email address patterns to match

User Email Pattern

 Specify the Email pattern (you can use the * wildcard, or !, and can list mutiple Email Patterns separated by commas (,). e.g. test@gmail.com,*@gmail.co
