Quick View popup for products

Isn't it great when you can zoom in to the details of a product without leaving the page of search results you're on? We thought so, too. So we've included Product Quick View as a standard BPD feature from version 3.97.13.

With the Product Quick View Popup Widget, your customers can see product info, images, and technical details in a popup - all without navigating away from the page they're browsing. If they like what they see, they can instantly add the product to their cart.
