

Product Discovery & Site Search

A built-in search tool can be placed on a page or template by adding an appropriate Product Search widget. Several Product Search widgets are available. Each one renders different search and/or results display configurations.

Content by label

There is no content with the specified labels

Search Tool Types

Add one of these widgets to a page or template to render a search tool.

- [Product Search Widget](#) — Renders the standard search tool that allows the user to search products and/or content. Displaying product suggestions is optional.
- [Product Search With Category Widget](#) — Displays a product search with the option to specify results from a particular category.
- [Product Search With Preview Widget](#) — Displays each product that matches the search text with related elements such as category, image, title, price, etc.

Product Search with Preview Tool Widgets

For use with the Product Search with Preview tool only.

- [Product Search With Preview List Grid Widget](#) — Displays a message when your search returns no results. For use with the [Product Search with Preview](#) widget.
- [Product Search With Preview List Title Widget](#) — Renders the heading of the search results dropdown list when the Product Search with Preview Widget is used.
- [Product Search With Preview Show All Button Widget](#) — Displays the label on button that prompts the user to view more results when the [Product Search With Preview Widget](#) is used.

Search Tool Options

- [Product Search Fields](#)
- [Product Search with Static Content Page Results](#) — Configure the search tool to include results from content pages such as articles and blogs.
- [Product Search Preview Content](#) — Render a dropdown space below the Search tool when the user clicks in the search tool but has not started typing. Add whatever content in the space, e.g., a banner.

Lucene Text Search Engine

- [Product Search with Lucene Search Text Engine](#)
- [Lucene Introduction](#)
