

Customer Token Payments

For websites using eWAY, a Customer account can now add and manage a credit card as a 'token payment' in the "[Customer Self Service eCommerce Platform](#)". We've integrated this feature for online account payments so your Customers can select this stored credit card when paying invoices. Convenient and secure as card details do not have to be re-entered each time! The stored credit card can also be used to maintain a charge authority against the Customer, e.g., to settle outstanding amounts in your ERP. Please consult with Commerce Vision to explore this option.

For more information, see [Customer Token Payments](#).
