

CMS Version 1.21

New Features

- [Honeypot \(Anti-scraping Protection\) and Suspicious Activity Monitoring tools](#) — Worried about scraping bots, unwanted visitors or content stealing? The Honeypot and Suspicious Activity Report features provides ways to help monitor your website against content scraping and suspicious activities.
- [Product Promo Code Enhancements](#) — Two additional product promo codes are now available out-of-the-box. With the first, when customers buy a number of specific products, they get the lowest priced one for free. With the second, give them a special set price when they buy certain products together.
- [Dispute Invoices](#) — The Dispute Invoices feature allows Customer Users to query outstanding invoices in their Customer account. This provides an easy trackable way for your users to raise an issue against an unpaid invoice.
- [Two factor authentication for CMS Login](#) — Two-factor authentication (2FA) is now available for CMS User logins. This adds as an extra layer of security to protect your data and website by ensuring the person logging in is the owner of the account. When active, users must enter their password *and* verify the login through a PIN (passcode) provided by an app on their personal device.
- [HTML Editor update](#) — The WYSIWYG ('What You See Is What You Get') HTML editor has been updated. It now includes a number of new features that should make your text creation and editing even better! You can edit in full screen and directly insert special characters, as well as take advantage of a host of styling and formatting buttons and options in the toolbar.
- [Single Sign On – Microsoft Azure AD](#) — CMS 1.21.01 now offers support for the implementation of Microsoft Azure AD as a single sign on solution.
- [Export Cart to Excel](#) — How many of your customers don't checkout immediately once they reach cart? Or need a record of items for their manager? Give your users the option to have a record of their cart's contents before purchasing. The Add an Export to Excel button allows users to have their cart contents emailed to them in an Excel file. The out-of-the-box solution provides a default Excel template that can include a product image.
- [Online Discounts](#) — Online Discounts allow promotional price breaks to apply to targeted products to encourage or reward volume purchases. Set higher discounts for higher quantities! It is easy for your customers since promotion codes do not need to be entered. Discounts will automatically be calculated and flagged in the shopping cart.
- [Subscription Products](#) — Does your site offer products on a subscription basis? Such products could be digital items such as e-magazines, database resources and software applications. (But they could potentially also be physical products.) What is important is that when your customer purchases a Subscription Product, they are buying access to it for a subscription period (time frame). The Subscription Products feature manages products that are sold on a subscription basis.

Updates

- [Incorrect error message when editing JS file](#) — An incorrect warning message displayed when one JS file was being edited by multiple users. This has been fixed.
- [Standing Orders Due Days email](#) — Provision has been added to Standing Order settings to allow the user to change the edit the number of days before sending for the Standing Order Email Due Days email.
- [Publish and Revert Actions not logged in Audit Log](#) — Publish and Revert actions were not being logged in the Audit logged. They are now logged.
- [Change Credit Card Payment Provider in the CMS](#) — The Global setting when set in the Overrides window was not being saved. This has been corrected.
- [Set banner to be viewable by user only in specific Customer account](#) — Previously, there was no way to ensure a multiple Customer User could only view a banner when in a specific Customer account. A toggle has been added in Banner Maintenance to accommodate this need.
